Fishing
Canada’s fisheries make an important contribution to the economic health of the Dominion. The country includes more than 60 varieties of food fish and shell fish. They come from the fisheries resources of great macro-mammals, such as the cod, which breeds in the waters of the north, to the small fish of the estuaries, which are among the finest in the world. The Canadian fisheries products are of excellent quality, and are much sought after by the world’s markets. The Dominion of Canada can supply fish to every part and every need.

Lumbering
The lumbering industry of the Dominion of Canada ranks second only to agriculture among the primary industries in its contribution to national production. With a total forest area of more than 1,355,000 square miles, of which about 52 per cent are commercial timber lands, and 39 per cent new growth, the Dominion is a splendid source to develop its lumbering industry further. Of the 62,000 square miles of forest area, 42,000 square miles are in the forests of the Maritime provinces, and 20,000 square miles are in the forests of the Prairie provinces. The annual value of forest products is approximately $500,000,000.

Canada possesses an abundance and variety of natural resources with limitless water power for their development; with ample transportation facilities, with sea labor laws and a sound banking system. Factory sites are at present available at strategic points, and taxation is comparatively low.

Canada invites you to refresh yourself and renew your energies in its playgrounds, to study for yourself the great Dominion of Canada's possibilities, and to share the hospitality which she always extends to the stranger within her gates. Your entry will be made easy, and your welcome will be as wide as her boundaries.
