**DIORAMAS DEPICTING THE WORLD'S
GREATEST EXPEDITIONARY
ADVENTURES (14. 15. 18. 19)**

THE Burroughs Wellcome & Co. Exhibits at the Chicago Exposition, some of which are described in this book, represent the most recent steps towards ideal therapeutic, dietetic and pharmaceutic preparations.

The fixed Burroughs Wellcome & Co. policy is never to rest upon laurels already gained, but to press forward constantly to a higher standard of attainment. The steady pursuit of this policy has established amongst professional men throughout the world a confidence in the firm's products which is a reward in itself.

The physician who prescribes, the pharmacist who dispenses, or the patient who takes any medicament bearing a Burroughs Wellcome & Co. label, knows that it challenges judgment by the highest criteria available to-day.

Burroughs Wellcome & Co. are the successors to, and sole proprietors of, the business of Brockedon, who originated compressed medicines in the shape of bi-convex discs. They have pioneered the development of compressed medicaments under their trade mark names 'TABLOID' and 'SOLOID' by means of specially-devised machinery, invented and produced at great cost and working with the precision of fine watch-work.

By its aid, under the direction of specially-trained chemists and pharmacists of long experience, compressed products of unique accuracy of dosage, perfection of finish and supreme reliability are produced.

By combining Research with Industry, pioneer preparations of scientific certainty have been produced, which have replaced the uncertain, unreliable pharmaceuticals of former years. Some of the results of scientific research, such as 'DIGINUTIN' and 'ERNUTIN,' which replace their uncertain predecessors—Tincture of Digitalis and Extract of Ergot—are described in these pages. Other examples of the firm's pioneer work are exhibited.

The first supplies of anti-diphtheritic serum to be used in the U.S.A. owed their origin to Burroughs Wellcome & Co.

Special attention is devoted to the production of fine chemicals and galenicals of outstanding purity and to the preparation of animal and vegetable medicinal substances of definite strength and activity. The Wellcome Materia Medica Farm assists materially in maintaining supplies of medicinal plants of a high standard of quality.

As pioneers in the supply of medical outfits of supreme quality and compactness for the use of physicians, surgeons, explorers and travellers, Burroughs Wellcome & Co. have a world-wide reputation. The exhibits include historical medical equipments of the most celebrated pioneers of travel. 'TABLOID' EQUIPMENTS are the only Medical Outfits to have been carried to the North and South Poles by land, sea and air.

The high quality of Burroughs Wellcome & Co. products is indicated by the receipt of over 270 Competitive Highest Awards at the great International Exhibitions of the world, including TWO GRAND PRIZES at the International Congress of Medicine, London (Eng.), 1913.

BURROUGHS WELLCOME & Co. have pioneered the introduction of many new and valuable natural medicinal agents, notable amongst which is Strophanthus Kombé, the powerful African arrow poison which has proved so valuable in certain heart disorders.

Sir Thomas Fraser, of Edinburgh University, first investigated and demonstrated the properties of Strophanthus from a comparatively small specimen, and Burroughs Wellcome & Co. immediately took vigorous steps to procure supplies regardless of expense and immense difficulties.

Pioneers in the introduction of Strophanthus

Emissaries were sent to collect the small reserves of arrow poison from the rude huts of many Central African warriors. In this way a fair quantity was accumulated, but at a cost of more than £20 per pound.

A bundle of the first consignment of strophanthus which reached Europe for
BURROUGHS WELLCOME & Co.

Thus the true Strophanthus Kombé was first introduced to the world—Burroughs Wellcome & Co. were first in the field.

These earliest supplies were obtained quite regardless of monetary considerations and, notwithstanding the great cost, parcels of medicinal agent and its preparations were at once distributed, without charge, to leading physicians throughout the world. By this means the therapeutic properties of strophanthus were confirmed by investigators in various lands.

More recent pioneer research work of Burroughs Wellcome & Co. is well illustrated by such noteworthy products as 'ERNUTIN' and 'DIGINUTIN.' 'ERNUTIN,' which may be employed wherever ergot is indicated, is of unvarying strength and of the highest degree of activity.

The most stable salt of Ergotoxine is Ergotoxine Ethanesulphonate. This was *originated* and *introduced* by Burroughs Wellcome & Co. in 1925, and on the recommendation of the British Pharmacopœia Subcommittee on Ergot, was added to the B.P., 1932, to replace the unsatisfactory hypodermic injection of ergot included in former editions.

In order to replace unstable tinctures of digitalis, 'DIGINUTIN,' a stable solution of the total glucosides of digitalis leaf, prepared under laboratory conditions, corresponds in strength to fresh tincture of digitalis. 'TABLOID' 'DIGINUTIN' is now also available.

In the treatment of leprosy with esters of acids of the chaulmoogric series, 'MOOGROL' has been used in leper colonies throughout the world, and was the result of years of patient investigation and clinical trial. The addition of iodine markedly reduces the irritating property of the ethyl esters, and preliminary clinical evidence obtained with IODISED 'MOOGROL' has confirmed this.

In the dietetic field, 'DEXIN' High Dextrin Carbohydrate marks the outcome of researches conducted in the Wellcome Experimental Research Laboratories, New York (see page 43).

ERGOTOXINE

ERGOTOXINE—an alkaloid of ergot possessing a powerful action in contracting the uterus—was discovered and isolated owing to the initiative of Burroughs Wellcome & Co. 'ERNUTIN' is a clear solution presenting Ergotoxine—*together with 'Ergamine' and 'Tyramine'—in definite amount* and in a state of chemical purity. 'ERNUTIN' (Oral) contains 0.033 per cent. and 'HYPOLOID' 'ERNUTIN' 0.1 per cent. of Ergotoxine Ethanesulphonate. 'Ergamine' and 'Tyramine' are organic bases present in ergot.

Preparations

TRADE MARK 'ERNUTIN' (ORAL) (20 per cent. alcohol) [B. W. & Co.]
Containing 0.033 per cent. of Ergotoxine Ethanesulphonate.
Bottles of 30 c.c., 4 fl. oz. and 16 fl. oz.

TRADE MARK 'HYPOLOID' BRAND 'ERNUTIN' TRADE MARK [B. W. & Co.]
(1 per cent. alcohol)
Containing 0.1 per cent. of Ergotoxine Ethanesulphonate.
'Hypoloid' ampoules of 0.6 c.c. (min. 10 approx.) of sterile solution, in boxes of 6 and 100

ERGOTOXINE ETHANESULPHONATE presents Ergotoxine in a chemically-pure state. This salt, originated by Burroughs Wellcome & Co. in 1925, is white, crystalline, stable and more soluble than the phosphate.

Preparations

TRADE MARK 'TABLOID' BRAND ERGOTOXINE ETHANESULPHONATE,
0.0005 gramme (gr. 1/130 approx.) [B. W. & Co.]
Bottles of 25

TRADE MARK 'TABLOID' BRAND HYPODERMIC ERGOTOXINE ETHANESULPHONATE,
gr. 1/100 [B. W. & Co.]
Each strength in tubes of 12 and 50 and packages of 500

TRADE MARK 'WELLCOME' BRAND ERGOTOXINE ETHANESULPHONATE
Tubes of 0.1 gramme

TRADE 'MOOGROL' MARK

A Mixture of Esters of the Acids of the Chaulmoogric Series resulting from investigations in The Wellcome Chemical Research Laboratories dating from 1904

USED in the treatment of leprosy.

Preparation

'MOOGROL' [B. W. & Co.]
(Trade Mark)

Bottles of 25 c.c. and 100 c.c.

IODISED TRADE 'MOOGROL' MARK

A Mixture of Esters of the Acids of the Chaulmoogric Series with 0.5 per cent. Iodine

IODISED 'MOOGROL' is a mixture of esters of the acids of the chaulmoogric series with 0.5 per cent. of iodine, suitable for intramuscular or intradermal injection. The addition of the iodine markedly reduces the irritating quality of the ethyl esters.

The intradermal method has been employed by the Philippine workers for some time. The advantages claimed are that it produces more rapid resolution of the superficial lesions and that it is relatively free from general and local reactions.

At the Leonard Wood Memorial Conference of Leprosy, held at Manila in January, 1931, the use of iodised esters, particularly by the intradermal method, was strongly recommended.

Preparation

IODISED 'MOOGROL' [B. W. & Co.]
(Trade Mark)

Bottles of 25 c.c. and 100 c.c.

PREPARATION OF 'DIGINUTIN' IN LABORATORY

DIGITALIS PURPUREA

TRADE 'DIGINUTIN' MARK
(Physiologically Standardised)

'DIGINUTIN' is a stable solution of the total glucosides of digitalis leaf, freed from inert material and submitted to biological assay. One advantage of 'DIGINUTIN' is its stability.

'DIGINUTIN' is prepared under laboratory conditions from standard digitalis leaf and possesses distinct advantages over the U.S.P. tincture.

In order to secure, for ambulatory patients, the additional advantage of convenience in administration, 'DIGINUTIN' is also issued as a 'TABLOID' product. The strength of each product is standardised to correspond with U.S.P. requirements.

CAUTION.—Because 'Diginitin' is of full strength when made, and retains its full strength on keeping, it may actually be more potent than the digitalis tincture hitherto employed. When giving massive doses, therefore, caution is necessary.

Preparations

'DIGINUTIN'—(For Oral Administration)—A stable solution of the (Trade Mark) total glucosides of digitalis leaf. 1 c.c. (17 minims) corresponds to 0.1 gm. of International standard of digitalis leaf [B. W. & Co.] = approx. 1 Cat Unit.

Bottles of 1 fl. oz. and 8 fl. oz.

TRADE 'TABLOID' BRAND 'DIGINUTIN', TRADE MARK min. 5 and min. 10 [B. W. & Co.]

Each strength in bottles of 25 and 100

SCENES ON THE WELLCOME MATERIA MEDICA FARM

GATHERING AND LOADING DIGITALIS

LIGHT RAILWAY TO WORKS

From photographs developed with 'TABLOID' 'RYTOL'

 THE WELLCOME
 MATERIA MEDICA FARM
 

One of the outstanding features of the work of Burroughs Wellcome & Co. is the emphasis laid on precision and scientific control. If this control can operate at the very commencement of production, so much the better. By actually growing the plants required in the preparation of extracts, tinctures, alkaloids and other pharmaceutical products, the manufacturing chemist is able to exercise complete control at every stage. The Wellcome Materia Medica Farm, Kent (Eng.), is, therefore, a most important development of the firm's activities.

Control
from the
beginning

GATHERING DIGITALIS

Great care is taken in collecting and drying the leaves, otherwise the medicinal activity would be adversely affected

In the cultivation of medicinal plants, there are countless problems to be solved and difficulties to be overcome. For example, there is the question of soil. Some soils are

naturally adapted to support certain plants, but are quite unsuitable for other species. In the wild state, Nature works out this problem in her own way—seeds falling into the wrong habitat having little chance of germination and still less chance of survival. An experienced botanist can, therefore, form some estimate of the soil from a consideration of the vegetation it supports. Many experiments are necessary in order to determine the ideal soil for each particular plant it is proposed to cultivate. Even slight variations in the soil contents may produce variations in the amount of active principles to which medicinal plants owe their therapeutic value. Possibly this explains the origin of the idea that cultivated plants have not the same virtue as the wild. At the Wellcome Materia Medica Farm all the evidence points in the opposite direction. Careful estimations show that the cultivated herb, when the cultivation has been properly carried out, has a distinct advantage.

The ideal times for harvesting the various crops are not so easily determined for medicinal herbs as for oats, or wheat, or barley. The observations of the farmer have to be supplemented by the exact analyses of the chemist, and Burroughs Wellcome & Co. are able to supply the knowledge of both. It is small wonder, then, that 'Wellcome' Brand galenical preparations occupy a niche by themselves in the appreciation of physicians and pharmacists. From the growing plants to the finished products every operation is under expert scientific supervision.

INJECTION TREATMENT

THE first recorded injection by means of an instrument was made by an Irish surgeon in 1844. It was not until 1852, however, that Charles Pravaz, Lyons, devised an instrument, consisting of a barrel, plunger and trocar, from which later models have been evolved. The latest development is the 'AGLA' Hypodermic Syringe in a Spirit-tight Container. This compact outfit enables an 'AGLA' Hypodermic Syringe, with a needle in position, to be

Intramuscular Injection

carried, similarly to a fountain pen, in the vest-pocket, ready for immediate use. It consists of an 'AGLA' Two-piece Hypodermic Syringe fitted with a Rustless steel needle in a glass container. The piston acts as a stopper and fits firmly into the glass container, thus preventing evaporation or leakage of the alcohol, in which the Syringe is constantly immersed. The Syringe and Spirit-tight Container are supplied in a Metal Case to ensure safe carriage in pocket or bag.

TRADE MARK 'HYPOLOID' BRAND PRODUCTS

IN 'HYPOLOID' products the physician has at his disposal a wide range of medicaments convenient for immediate injection and of an exceptionally high standard of reliability and accuracy. Each 'HYPOLOID' product contains the stated quantity of medicament, either in solution or suspended in a non-irritating fluid vehicle, and protected from contaminating influences by an ampoule. The

Intravenous Injection

'HYPOLOID' ampoules are made from specially-tested neutral hard glass, having no deleterious action on the contents.

Unless otherwise mentioned, each 'HYPOLOID' ampoule enables one cubic centimetre (approximately min. 16) to be injected.

(For full list of 'Aglæ' Syringes, Needles and 'Hypoloid' products, see *Wellcome's Excerpta Therapeutica*)

TREATMENT OF VARICOSE VEINS
BY INJECTION

'HYPOLOID' QUININE AND URETHANE and 'HYPOLOID' SODIUM MORRHUATE are used in the injection treatment of varicose veins. The solution is injected into the vein at various points by means of a syringe and a fine needle. The contact of the injection fluid with

the endothelium of the vein results in a phlebitis and a gradual deposition of fibrin; organisation takes place and the vein shrinks to a solid cord. 

QUININE AND URETHANE

'HYPOLOID' QUININE AND URETHANE contains Quinine Dihydrochloride, 0.26 gm., and Urethane, 0.13 gm., in each 2 c.c. of sterile, distilled water and is ready for immediate intravenous injection.

Injection into Varicosity

Preparations

TRADE MARK 'HYPOLOID' BRAND QUININE AND URETHANE [B. W. & Co.]

℞ Quininae Dihydrochloridi, 0.26 gramme
Urethani, 0.13 gramme

Position of Parathyroid Gland indicated in red

OVARIAN SUBSTANCE

Position of Ovary indicated in red

SUPRARENAL GLAND

Position of Suprarenal Gland indicated in red

ANIMAL SUBSTANCES

ON the pharmaceutical side of organo-therapy Burroughs Wellcome & Co. were, and continue to be, pioneers. 'TABLOID' products are issued which present the whole gland substance. No solvents are used. The system of gland-grouping, originated by Burroughs Wellcome & Co., in which the claims of each gland substance are examined with definite reference to established physiological and clinical evidence, enables an estimate to be made of the potential therapeutic value of any gland substance or combination.

SUPRARENAL (WHOLE GLAND)

IMPROVEMENT sometimes follows large doses of suprarenal gland substance in Addison's syndrome. In various forms of autonomic imbalance, or in Graves' syndrome, and in hyperthyroidism, persistent administration often relieves symptoms. It has been found useful in conditions dependent upon hypoadrenia, such as certain forms of depression and melancholia, and after influenza and other acute infections, especially diphtheria.

Preparations

TRADE MARK 'TABLOID' BRAND SUPRARENAL GLAND, gr. 1; and gr. 5
[B. W. & Co.]
Each strength in bottles of 100 and 500

THYROID GLAND

'TABLOID' THYROID GLAND represents the whole substance of carefully-selected, healthy sheep's thyroids and can be relied on to produce the complete therapeutic effect of the fresh gland.

gr. 1/2; gr. 1; gr. 1½; gr. 2;
gr. 2½; and gr. 5
[B. W. & Co.]

Each strength in bottles of 100 and 500

PARATHYROID GLAND

PARATHYROID GLAND is given to raise the blood-calcium level when this is below normal in Raynaud’s disease, urticaria, eczema and prurigo; also in angio-neurotic œdema and hay fever. It is indicated in other states of lowered blood-calcium associated with tetany or with muscular irritability. A calcium salt is usually given conjointly with parathyroid to ensure that dietary calcium is sufficient for metabolic purposes. For this purpose, ‘TABLOID’ PARATHYROID GLAND AND CALCIUM LACTATE is issued.

Section of PARATHYROID GLAND
Magnification 50 diameters
Compare with THYROID, above

In view of the uncertainty as to the identity of the material sometimes offered as parathyroid gland, the gland substance used in ‘TABLOID’ PARATHYROID GLAND undergoes careful inspection, checked periodically by microscopic sections. By these means, the genuineness of all material used in ‘TABLOID’ PARATHYROID GLAND is ensured.

Preparations

TRADE MARK ‘TABLOID’ BRAND PARATHYROID GLAND, gr. 2/5 [equivalent to gr. 1/10 of desiccated gland] [B. W. & Co.]

(Equivalent to gr. 1/40 of desiccated gland)
Calcii Lactatis, gr. 5

Bottles of 100 and 500

PLURI-GLANDULAR PREPARATIONS

THE interdependence of the various endocrine glands and the balance which seems to exist in the functional activities of certain groups has the result that irregular function of one unit is followed by a disturbance of others. Although changes in the function of a single gland may instigate a disturbance, yet other endocrine glands, by their reciprocal action, may sometimes contribute very greatly to the clinical picture. Such imbalance suggests a pluri-glandular therapy.

INDICATIONS

‘TABLOID’ BRAND THREE GLANDS is indicated in cretinism, backwardness in children and other conditions of hypothyroidism.

‘TABLOID’ BRAND MIXED GLANDS, No. 1 (*Male*), is indicated in hypotonic and neurasthenic conditions, premature senile changes and hypochondriasis. It may also be found particularly effective in the female.

‘TABLOID’ BRAND MIXED GLANDS, No. 2 (*Female*), is indicated in the same conditions as No. 1 (*Male*), and in amenorrhœa and at the menopause.

MEDICAL EQUIPMENTS

One of the 'TABLOID' MEDICINE CASES used by Rear-Admiral Byrd on his Antarctic Expedition, 1928-30

One of the 'TABLOID' MEDICINE CASES carried round the world on the U.S.A. Army Air Service World Flight

DIORAMA—PEARY AT THE NORTH POLE

DIORAMAS DEPICTING TYPICAL PIONEER FEATS OF EXPLORATION WITH WHICH 'TABLOID' MEDICAL EQUIPMENTS HAVE BEEN ASSOCIATED

TWENTY-FOUR typical Dioramas are exhibited.

These show Stanley in the heart of the dense forests of Central Africa; Peary and his companions at the North Pole; Captain Scott's Expedition to the Antarctic, during which he succeeded in reaching the South Pole; Amundsen at the South Pole; the American Ladies' Hospital Ship "Maine"; Members of the Mount Everest Expedition at their Main Camp on the Rongbuk Glacier, with Mount Everest in the distance; Alcock on his pioneer Atlantic flight; Ross Smith on his flight to Australia; the U.S.A. Army Air Service flyers reaching Croydon on their World Flight; and Rear-Admiral Byrd's Transatlantic and South Pole Flights.

Other Dioramas illustrate other historical events with which 'Tabloid' Medical Equipments have been associated and incidents in which 'TABLOID' FIRST-AID equipments prove their value.

The problem of providing a ready supply of medicaments for administration in emergencies or places remote from institutional aid was solved many years ago by Burroughs Wellcome & Co. In the course of time, various types of medical and first-aid outfits have been evolved to meet new conditions as they arose, so that now an equipment is available, suitable for every occasion.

DIORAMA—BYRD LANDING IN FRANCE AFTER HIS TRANSATLANTIC FLIGHT

TRADE MARK 'TABLOID' BRAND

CHESTS AND CASES

THE EXHIBIT shows photographs and relics of Burroughs Wellcome & Co. Medicine Cases carried by many famous explorers, travellers and aviators in every part of the world, on many epic adventures.

'TABLOID' MEDICAL EQUIPMENTS hold the unique record and distinction of having been **First, Second and Third at the North Pole** and **First, Second and Third at the South Pole**. They were the **only** medical outfits actually carried to or over the Poles by Peary, Amundsen, Scott and Byrd.

A 'Tabloid' Medicine Case was used by Rear-Admiral Byrd, U.S.N., on his flight to the North Pole and later on his South Pole Expedition. On his transatlantic flight he carried 'Tabloid' First-Aid.

The credit of being the first to circumnavigate the globe through the air belongs to Lieutenant Lowell H. Smith and his companions of the U.S.A. Army Air Service. Each plane carried as its sole medical equipment a 'Tabloid' Medicine Case.

That preference should, time after time, be given to Burroughs Wellcome & Co. outfits, is not mere coincidence. Each succeeding order for 'Tabloid' Equipments is a striking and irrefutable tribute to the efficiency of the last.

TRADE MARK
'TABLOID' BRAND
 HYPODERMIC POCKET-CASES

Provide complete Equipments for hypodermic work in the smallest possible space. The metal cases may readily be sterilised on removal of their contents.

NO. 7 'TABLOID' BRAND ASEPTIC HYPODERMIC POCKET-CASE

No. 7 'Tabloid' Brand Aseptic Hypodermic
 Pocket-Case
 Measurements: $3\frac{1}{2} \times 3\frac{1}{8} \times \frac{7}{8}$ in.

Fitted with detachable nickel-plated aseptic frame with rack carrying tubes of 'Tabloid' Hypodermic products and holders for syringe and needles.

Aluminium and
 Solid Silver.

NO. 40 'TABLOID' BRAND ASEPTIC HYPODERMIC POCKET-CASE

("The Mussel Shell")

Component parts held in metal clips and rack, ensuring maximum security.

Nickel-plated Metal; complete
 with soft leather cover.

No. 40 'Tabloid' Brand Aseptic
 Hypodermic Pocket-Case
 Measurements: $3\frac{1}{4} \times 1\frac{3}{8} \times 1$ in.

**HYPODERMIC AND OPHTHALMIC
 POCKET-CASES**

An efficient, compact and portable Outfit equipped for immediate hypodermic injection.

NO. 62 'HYPOLOID' BRAND HYPODERMIC POCKET-CASE

Contains an 'AGLA' Aseptic Hypodermic Syringe (min. 20 or 1 c.c.), two 'AGLA' Rustless steel needles, 10 'Hypoloid' products, two files and a list of 'Hypoloid' preparations.

Nickel-plated Metal.
 Weight, about 10 oz.

No. 62 'Hypoloid' Brand Hypodermic Pocket-Case

Measurements: $7\frac{1}{2} \times 4\frac{1}{2} \times 2\frac{3}{4}$ in.

NO. 128 'TABLOID' BRAND MEDICINE POCKET-CASE

A compact Case specially suitable for hard wear. Metal Case covered with Black Morocco Leather. Contains *fourteen* tubes of 'Tabloid' and 'Soloid' Brand products, *nine* tubes of 'Tabloid' Brand Hypodermic products, an 'AGLA' Aseptic Hypodermic Syringe, needles, etc.

No. 128 'Tabloid' Brand Medicine Pocket-Case
Measurements: $6 \times 3\frac{3}{4} \times 1$ in.

NO. 10 ASEPTIC HYPODERMIC 'TABLOID' BRAND POCKET-CASE

With Soft Leather Cover

Each part of the syringe is held separately in a holdfast clip

Nickel-plated Metal

Measurements: $2\frac{1}{2} \times 1\frac{3}{4} \times 1$ in.

NO. 20 ASEPTIC HYPODERMIC 'TABLOID' BRAND POCKET-CASE

Nickel-plated Metal

With Soft Leather Cover.
Each part of the syringe is held separately in a holdfast clip

Measurements: $4\frac{1}{2} \times 1\frac{3}{4} \times \frac{3}{4}$ in.

NO. 125 'TABLOID' BRAND MEDICINE
POCKET-CASE

Measurements: $6\frac{1}{2} \times 4 \times 1\frac{1}{2}$ in.

Also supplied in
Morocco Leather, in
Cowhide, Pigskin,
Brown or Green Seal
Leather or Brown
Crocodile Leather

Green Crocodile
Leather

NO. 254 'TABLOID' BRAND MEDICINE CHEST
("The Indian")

Measurements: $9 \times 6\frac{3}{4} \times 6\frac{1}{4}$ in.

Ideal for Missionary,
Expeditionary
or itinerant use

Japanned Metal

Weight,
approximately
12 lb.

NO. 708 'TABLOID' BRAND FIRST-AID
("The Nurse's")

Contains *two* tubes of 'Tabloid' and 'Soloid' Brand products, 'Vaporole' Iodine, 'Vaporole' Aromatic Ammonia, for use as "Smelling Salts," 'Borofax' Brand Boric Acid Ointment, 'Carofax' Brand Solidified Carron Oil, jaconet, 'Tabloid' Bandages and Dressings, plaster, protective skin, camel-hair brush, pins, etc.

Measurements: $6\frac{1}{2} \times 3\frac{1}{4} \times 2\frac{3}{8}$ in.

Aluminised Metal

NO. 709 'TABLOID' BRAND FIRST-AID
("The Boy Scout's")

Contains 'Vaporole' Iodine, 'Vaporole' Aromatic Ammonia, 'Borofax' Brand Boric Acid Ointment, 'Carofax' Brand Solidified Carron Oil, jaconet, 'Tabloid' Bandages and Dressings, plaster, protective skin, camel-hair brush and pins.

Measurements: $6\frac{1}{2} \times 3\frac{1}{4} \times 2\frac{3}{8}$ in.

Aluminised Metal

Waist-belt or cycle attachment, at a small extra cost

NO. 714 'TABLOID' BRAND FIRST-AID
("Pocket-Kit")

Contains 'Tabloid' Bandage and Boric Compress, 'Vaporole' Iodine, 'Vaporole' Aromatic Ammonia, 'Borofax' Brand Boric Acid Ointment, 'Carofax' Brand Solidified Carron Oil and adhesive plaster.

Blue and Gilt
Enamelled Metal

Measurements: $4 \times 2\frac{1}{2} \times \frac{3}{4}$ in.

NO. 715 'TABLOID' BRAND FIRST-AID

Contains 'Tabloid' Brand Bandages and Dressings, 'Vaporole' Iodine, 'Vaporole' Aromatic Ammonia, for use as "Smelling Salts," 'Borofax' Brand Boric Acid Ointment, sal volatile, 'Carofax' Brand Solidified Carron Oil, jaconet, plaster, protective skin, scissors, pins, etc., and *eight* tubes of 'Tabloid' and 'Soloid' Brand products.

Measurements: $5\frac{1}{2} \times 4 \times 1\frac{1}{2}$ in.

Aluminised Metal

NO. 134 'TABLOID' BRAND MEDICINE
POCKET-CASE

Fitted with eight phials of 'Tabloid' Brand products, etc.

Cowhide, Morocco, Pigskin, Brown Seal or Crocodile Leathers.

No. 134 'Tabloid' Brand Medicine Pocket-Case

Measurements: $6\frac{1}{2} \times 4\frac{1}{2} \times 1\frac{1}{2}$ in.

NO. 231 'TABLOID' BRAND MEDICINE CASE

An excellent Equipment for missionary, expeditionary, or itinerant use.

Black Japanned Metal

No. 231 'Tabloid' Brand Medicine Case

Measurements: $11 \times 8 \times 3\frac{1}{2}$ in.

Weight, about 8 lb.

NO. 258 'TABLOID' BRAND MEDICINE CASE
 ("The Settler's")

Compact and useful for settlers' or travellers' use, and for stations, farms, or camps in out-of-the-way places.

Black Japanned Metal

Weight, $5\frac{1}{4}$ lb.

No. 258 'Tabloid' Brand Medicine Case
 Measurements: $8\frac{1}{4} \times 6\frac{3}{4} \times 4\frac{3}{8}$ in.

NO. 261 'TABLOID' BRAND MEDICINE CASE
 ("The Orient")

Elegant, compact and well-fitted, this Case is specially devised and arranged for service in the East. A reliable companion that will provide efficient aid on the spot.

Aluminised Metal

No. 261 'Tabloid' Brand Medicine Case
 Measurements: $7\frac{3}{8} \times 4\frac{1}{4} \times 2\frac{1}{4}$ in.

TRADE MARK 'SOLOID' BRAND
 ANALYSIS AND TEST CASES

Portable Outfits containing apparatus and reagents for the analyses of urine, water, sewage, etc., and Equipments providing, in small compass, the essentials for the bacteriological examination of blood, pus, sputum, etc.

NO. 505 'SOLOID' BRAND
 BACTERIOLOGICAL CASE

Owing to its small size and light weight, this Case can readily be carried into the sick chamber, to obtain a blood specimen or a throat swab.

Nickel-plated Metal, with soft leather cover.

No. 505 'Soloïd' Brand Bacteriological Case
 Measurements: $6 \times 3\frac{1}{4} \times 1\frac{3}{8}$ in.

NO. 510 'SOLOID' BRAND URINE TEST CASE
 Compact and easily rendered aseptic.

Contains the means of applying to urine qualitative and quantitative tests for albumin, sugar, etc.

Nickel-plated Metal, with soft leather cover.

No. 510 'Soloïd' Brand Urine Test Case
 Measurements: $5\frac{3}{8} \times 3\frac{3}{8} \times 1\frac{1}{4}$ in.

TRADE MARK
'TABLOID' BRAND FIRST-AID
 ("PAC-KITS")

THE UNIT TYPE PACKAGE SYSTEM
 OF FIRST-AID KITS AND REFILLS

THE unit type of 'TABLOID' FIRST-AID consists of a series of Cases containing first-aid materials packed in standardised units and multiples of that unit.

Each unit presents one or more complete treatment, and each dressing, such as 'Tabloid' Bandage Boric Compress, is also complete in itself.

The dressings are sealed, sterilised and so wrapped that they are dirt and dust proof.

NO. 750—10 UNITS

Size: $7\frac{1}{2} \times 4\frac{1}{2} \times 2\frac{1}{2}$ in.

NO. 751—12 UNITS

Size: $10\frac{1}{16} \times 6 \times 3\frac{1}{2}$ in.

NO. 754—36 UNITS

Size: $13\frac{1}{4} \times 9 \times 2\frac{1}{2}$ in

Size: $9 \times 8 \times 2\frac{1}{2}$ in.

NO. 753—24 UNITS

Size: $9 \times 9 \times 2\frac{1}{2}$ in.

DIETARY ADJUNCTS

IMPORTANT additions to the list of Burroughs Wellcome & Co. dietetic preparations are 'DEXIN' High Dextrin Carbohydrate, for modifying cow's milk for infant feeding and for use in invalid dietary, and 'KEPLER' HÆMOGLOBIN WITH MALT EXTRACT AND COD LIVER OIL (B Vitamins Fortified).

TRADE MARK
'DEXIN' BRAND

HIGH DEXTRIN CARBOHYDRATE

'DEXIN,' the result of researches carried out at the Wellcome Experimental Laboratories, New York, provides palatable, easily digested carbohydrate for modifying cow's milk in infant feeding and for addition to the diet of the convalescent or adults subject to intestinal disturbances of a fermentative nature. During pregnancy, 'DEXIN' meets the increased maternal demand for carbohydrate. Its approximate composition is Dextrin, 75 per cent.; Maltose, 24 per cent.; Mineral Ash, 0.25 per cent.; Moisture, 0.75 per cent.

'DEXIN' is soluble in all proportions in milk and water and may be given to adults with coffee, cocoa or milk, or sprinkled on fruit or cereals.

Literature is available with chart of measured 'DEXIN' feeding for infants up to 12 months.

'DEXIN' prevents the formation of indigestible milk curds and facilitates the digestion of milk by the infant, providing, at the same time, palatable, easily-assimilated carbohydrates.

TRADE 'KEPLER' MARK HÆMOGLOBIN
WITH MALT EXTRACT AND COD LIVER OIL

(B VITAMINS FORTIFIED)

Prescribed: R 'KEPLER' H.M.O.V.

CHART OF FEEDING TESTS SHOWING
AVERAGE GAIN IN WEIGHT

A to B—Progress in 20 days on ORDINARY DIET

B to C—Progress in 15 days on ordinary diet to which
2 grams of 'KEPLER' H.M.O.V. were
added daily

As it is not fermented by most intestinal bacteria it checks tendency to infantile diarrhoea, and provides a valuable high dextrin carbohydrate food for adults, especially those liable to intestinal fermentation.

Preparation

TRADE MARK 'DEXIN' BRAND HIGH DEXTRIN CARBOHYDRATE [OFF B. W. & Co.]

Tins of 12 ounces and 3 lb.

'KEPLER' HÆMOGLOBIN
WITH MALT EXTRACT AND COD LIVER OIL
(B VITAMINS FORTIFIED)

Prescribed as 'KEPLER' H.M.O.V.

This preparation is not only rich in Vitamins A, B and D, but presents the natural iron-containing constituent of the blood—hæmoglobin—which is more readily absorbed from the alimentary canal than inorganic salts of iron.

The nausea experienced by some patients after taking cod liver oil has been effectively overcome in 'KEPLER' HÆMOGLOBIN WITH MALT EXTRACT AND COD LIVER OIL. No taste of the oil remains in this combination, and difficulty of administration does not arise. This fact alone would be sufficient to give a position of great usefulness to the physician.

The combination has, however, a greater claim which places it in a unique position amongst dietary medicaments. Malt extract contains the B vitamins, and this product is further fortified in this important respect with B vitamins from yeast. Vitamin B deficiency is always a serious factor in cases of hypo-vitaminosis. The problem of adding a supply of Vitamin B to the diet, in addition to Vitamins A and D, is simplified by prescribing 'Kepler' H.M.O.V.

Nausea after
Cod Liver Oil
overcome

Vitamin B
content of
Malt Extract

VITAMIN A TESTS ON RATS

RAT 1.—Fed on diet devoid of Vitamin A. Shows xerophthalmia, rough coat and general lack of condition

RAT 2.—Fed on same diet as its litter mate, Rat 1, but with the daily addition of 8.3 mgm. of 'KEPLER' COD LIVER OIL WITH MALT EXTRACT

THE IDEAL DIETARY ADJUNCT

Few conditions of hypo-vitaminosis can be considered as due entirely to the lack of one single vitamin. The symptoms due to the deficiency of one vitamin are accentuated when the complication of deficiency in another vitamin is superadded. The physician in these cases is faced with the task of thoroughly rebuilding the diet with the introduction of a full vitamin content.

Diets deficient in vitamins may be fully completed by administering 'Kepler' H.M.O.V., and adding fruit to the diet. Whichever one of the varied types of nutritional disorders the physician approaches, either in infants or in adults, this product simplifies the problem in a fashion not to be obtained by other means.

'KEPLER' COD LIVER OIL

For many years 'KEPLER' COD LIVER OIL has maintained its position as an effective therapeutic agent in diseases associated with deficiency of Vitamins A and D. It is presented in 'Kepler' Cod Liver Oil with Malt Extract, which is delicious to take, and, in addition, contains the B vitamins. 'Kepler' Cod Liver Oil undergoes animal feeding tests. Such control provides the physician with a safeguard which is readily appreciated.

Physiological
tests of
'Kepler'
Cod Liver Oil

All 'Kepler' Cod Liver Oil is tested for Vitamin A by the most practicable method, and the results are confirmed from time to time by the growth test on rats. All 'Kepler' Cod Liver Oil is tested for its content of Vitamin D by its ability to cure rickets in rats. The highest standards are demanded in the tests for both. The B Vitamins are invariably present in 'KEPLER' MALT EXTRACT.

RICKETS

Radiogram of ankle in rickets, showing lipping and irregularity of the epiphyseal line

Radiogram of ankle after administration of cod liver oil to a case of rickets, showing evidence of fresh calcification at the epiphyseal line

RICKETS

THE value of cod liver oil in the treatment of rickets has been established by clinical results obtained in practice extending over a long period of years.

From being empirical, this treatment has now become established on a definite basis by reason of the discovery that good cod liver oil is rich in Vitamin D, which has a definitely-proved anti-rachitic action.

The essential, in making choice of a cod liver oil preparation, for use either in the prevention or in the cure of rickets, is to know that it is rich in Vitamin D. So far as 'KEPLER' COD LIVER OIL is concerned, this certainty is established, not merely by the records of many years' clinical experience, but by the fact that it has been since 1923 specially tested for its **Vitamin D** content.

It should not be overlooked that when the normal diet is lacking in Vitamin D it is almost certain to be lacking in Vitamin A also. Cod liver oil supplies this deficiency as well as that of Vitamin D, and, as the only readily available source of Vitamin A which the clinician possesses, it should always be administered in rickets.

'KEPLER' MALT EXTRACT is prepared solely from the finest malted barley. It presents maltose and Vitamin B together with the ferment diastase, phosphates and albuminoids and is absolutely free from alcohol. In addition, it is particularly valuable as a vehicle for nauseous medicaments.

'KEPLER' COD LIVER OIL WITH MALT EXTRACT presents the finest cod liver oil so associated with the malt extract as to form a palatable combination of very agreeable

 flavour. It is rich in Vitamins A, B and D and is the ideal dietary adjunct in cases of specific disease as well as in conditions of general vitamin deficiency.

Preparations

'KEPLER' MALT EXTRACT [ B. W. & Co.]
(Trade Mark) *Bottles of two sizes*

'KEPLER' COD LIVER OIL [ B. W. & Co.]
(Trade Mark) *Bottles of 4, 8 and 16 fl. oz.*

'KEPLER' COD LIVER OIL WITH MALT EXTRACT [ B. W. & Co.]
(Trade Mark) *Bottles of three sizes*

'KEPLER' HÆMOGLOBIN WITH MALT EXTRACT AND COD LIVER OIL
(Trade Mark) (B Vitamins Fortified) [ B. W. & Co.]

Each fluidounce contains Hæmoglobin, gr. 4 $\frac{3}{4}$

Bottles of two sizes

OTHER COMBINATIONS

'KEPLER' MALT EXTRACT and 'KEPLER' COD LIVER OIL WITH MALT EXTRACT are also available in combination with medicaments such as Iron Iodide, Hypophosphites, etc.

For full list, see Wellcome's Excerpta Therapeutica

All Burroughs Wellcome & Co. Malt products, including 'Kepler' Cod Liver Oil with Malt Extract, are prepared with diastatic malt extract.

ALKALINE MEDICATION

IT IS difficult to persuade patients to persist in the treatment when sodium bicarbonate and similar alkalis are prescribed in the ordinary way. It is also noted that the psychological effects of such simple prescriptions are not good, and no single alkaline base can secure re-mineralisation of the system, which is often necessary.

'TABLOID' 'ALVESEN' [ B. W. & Co.] solves these difficulties. One in a glass of water produces a very acceptable effervescent draught; the equivalent of 25 doses is contained in a tube; each product presents the alkali bases—sodium, potassium, magnesium and calcium—in precise amounts.

SUGGESTED USES.—As an antacid draught: to correct hypo-alkalinity associated with gastric disturbance, the vomiting of pregnancy, malnutrition, nephritis, diabetes, fevers, œdema: to restore the alkaline balance in acidosis and to assist re-mineralisation.

Preparation

TRADE MARK 'TABLOID' BRAND 'ALVESEN' TRADE MARK [ B. W. & Co.]

(Formerly known as 'TABLOID' ALKALINE COMPOUND, EFFERVESCENT)

℞ Sodii Bicarbonatis,	gr. 5
Calcii Lactophosphatis,	gr. 3
Potassii Bicarbonatis,	gr. 1
Magnesii Sulphatis Exsicc.,	gr. 1
Sodii Chloridi,	gr. 1
Salis Effervescentis,	q.s.

The effervescent salt, on solution, produces 29.4 grains of soluble citrates, which, when oxidised in the system, produce approximately 15 grains of bicarbonate; each product, therefore, represents about 21 grains of bicarbonate.

Tubes of 10 and 25

IRON

Rx

BECAUSE of its hæmatinic value, iron, alone or in combination, is the therapeutic agent most usually employed in conditions of blood deficiency. Iron is conveniently prescribed in the form of Blaud Pill.

The therapeutic value of Blaud Pill depends upon the presence of iron carbonate in the ferrous state, but in ordinary forms of Blaud Pill there is great danger that this ferrous carbonate will be more or less oxidised to the irritating and astringent ferric salt.

The problem of securing the certain administration of ferrous carbonate in an unoxidised condition has been solved by the introduction of 'TABLOID' BLAUD PILL.

In this product the precise proportions of ferrous sulphate and alkaline carbonate are intimately associated in such a manner that interaction is prevented until the product is administered.

In the stomach, however, the interaction takes place and ferrous carbonate is formed. This fact is sufficient to account for the great superiority of the 'Tabloid' product. It is perfectly stable and permanent until it comes into contact with the gastric secretion.

'TABLOID' BLAUD PILL has given unqualified satisfaction in practice. It is easy to take, acts quickly and certainly, does not discolour the lips, tongue or teeth, and causes no impairment of the digestion.

Preparations

'TABLOID' BRAND BLAUD PILL, gr. 5; and gr. 10
(Trade Mark) (Sugar-coated) [B. W. & Co.]

Each represents 20 per cent. of ferrous carbonate.

Each strength in bottles of 100 and 500

EPHEDRA—MA HUANG

Rx

EPHEDRA—known to the Chinese as Ma Huang—is the source of one of the latest additions to our materia medica—the alkaloid Ephedrine. Investigation proves that there is great variation in the ephedrine content of different species of ephedra, and that some are practically devoid of activity.

The natural
genuine drug

EPHEDRINE HYDROCHLORIDE is prepared at the Wellcome Chemical Works, Dartford, Kent (Eng.), elaborate precautions being taken to secure purity, particularly in regard to freedom from pseudo-ephedrine and other subsidiary alkaloids, of which *l*-methyl-ephedrine and nor-*d*- ψ -ephedrine were discovered in Ma Huang by Burroughs Wellcome & Co. Standardisation by chemical means ensures uniformity of composition and therapeutic activity.

Preparations

'TABLOID' BRAND EPHEDRINE HYDROCHLORIDE, gr. 1/2
(Trade Mark) [B. W. & Co.]

Bottles of 25, 100 and 500

'HYPOLOID' BRAND EPHEDRINE HYDROCHLORIDE, 0.03 gm.
(Trade Mark) (gr. 1/2 approx.), in 1 c.c. [B. W. & Co.]

Boxes of 10 and 100 'Hypoloid' ampoules

'HYPOLOID' BRAND EPHEDRINE SULPHATE, gr. 8 3/4 [B. W. & Co.]
(Trade Mark) Boxes of 10 and 100 'Hypoloid' ampoules

'VAPOROLE' BRAND EPHEDRINE INHALANT COMPOUND
(Trade Mark) [B. W. & Co.]

For use with a 'Paroleine' or other Atomiser.

Bottles containing 1 fl. oz. and 16 fl. oz.

TRADE MARK 'TABLOID' BRAND
 R THREE BROMIDES, EFFERVESCENT

R Potassii Bromidi,	0.4 gramme
Sodii Bromidi,	0.4 gramme
Ammonii Bromidi,	0.2 gramme
Salis Effervescentis,	q.s.

IN 'TABLOID' THREE BROMIDES, EFFERVESCENT, the bromides of potassium, sodium and ammonium are presented with an effervescent base in order that the "salty" taste associated with ordinary bromide draughts may be effectively masked.

Acceptable to palate
 On solution, therefore, 'TABLOID' THREE BROMIDES, EFFERVESCENT, is acceptable to the most fastidious patient.

'TABLOID' THREE BROMIDES, EFFERVESCENT, is used chiefly as a sedative in conditions of nervous excitability, in hysteria, neuralgia, especially when arising from worry or overwork, and as an indirect hypnotic in the insomnia associated with these complaints. It has also proved effective in counteracting sea-sickness and vomiting from reflex causes.

Preparation

TRADE MARK 'TABLOID' BRAND THREE BROMIDES, EFFERVESCENT
 [B. W. & Co.]

DIRECTION.—One to two, dissolved in half a tumblerful of water, after food.

Tubes of 10 and 25

TRADE MARK 'TABLOID' BRAND
 LAXATIVE VEGETABLE
 Laxative or Purgative according to Dose

R Ext. Colocynthis Comp.,	gr. 1
Ext. Jalapæ,	gr. ½
Resinæ Podophyli,	gr. ¼
Leptandrini,	gr. ⅓
Ext. Hyoscyami,	gr. ¼
Ext. Taraxaci,	gr. ¼
Ol. Menthæ Piperitæ,	q.s.

(Plain or sugar-coated)

'TABLOID' LAXATIVE VEGETABLE is especially useful when calomel or other inorganic purgatives are contra-indicated.

Simple purgatives stimulate peristalsis and also increase intestinal secretion, but may give rise to irritation of the intestinal mucosa and to griping pain. It is advisable, therefore, to modify their action by prescribing them with other medicaments.

Reduced facsimile

'TABLOID' LAXATIVE VEGETABLE is particularly useful in chronic constipation. It effects a thorough and complete evacuation of the bowel.

In view of its colocynth content, 'TABLOID' LAXATIVE VEGETABLE is unsuitable in extreme youth or age, and should not be given during pregnancy.

Bottles of 25, 100 and 500

TRADE MARK 'TABLOID' BRAND
 CALOMEL, RHUBARB AND
 COLOCYNTH COMPOUND (C.R.C.)

R Hydrargyri Chloridi Mitis,	gr. 2
Pil. Rhei Comp., N.F.,	gr. 2
Pil. Colocynth. Comp., N.F.IX.,	gr. 2

IN 'TABLOID' CALOMEL, RHUBARB AND COLOCYNTH COMPOUND the griping action which frequently results from the administration of purgatives is controlled by carminatives. Calomel, on account of its indirect cholagogue effect, is of special utility in constipation associated with hepatic disorders. Rhubarb, in addition to its purgative action, has stomachic and subsequent astringent qualities.

Colocynth is a hydragogue cathartic, too drastic to be used alone, but of great value when combined with other aperients. This product presents a most effective

Griping
 action
 controlled

combination of cathartic substances of exceptional quality, uniting convenience of administration with accuracy of dosage.

'TABLOID' BRAND CALOMEL, RHUBARB AND COLOCYNTH COMPOUND may be prescribed generally in conditions where complete evacuation of the bowel contents is required; also in "biliousness" and dropsical conditions.

Preparations

Bottles of 12, 25, 100 and 500

Bottles of 12 and 25, sugar-coated; bottles of 100 and 500, plain or sugar-coated

TRADE MARK 'TABLOID' BRAND CALOMEL, RHUBARB AND COLOCYNTH COMPOUND (C.R.C.) (*Half Strength*) [WELLS B. W. & Co.]

Bottles of 100 and 500 (plain only)

'TABLOID' BRAND PRODUCTS contain only the finest medicaments. They are of exceptional purity, accurate in dosage, portable, and keep well in any climate. 'TABLOID' products for general therapeutic effect are made so as to disintegrate immediately, whilst those intended to exercise a local action (as upon the throat) are so prepared that they dissolve slowly in the mouth and secure the prolonged application of a suitable solution of their constituents. 'TABLOID' preparations intended to act after leaving the stomach are coated with keratin, soluble only in the alkaline secretions of the intestine.

The word 'TABLOID' is a registered trade mark or brand. In counterfeit preparations there lies danger to the physician's reputation and the patient's health. In ordering or prescribing, the word 'TABLOID' should always be written in full. Medical practitioners are requested to report any

This brand is stamped on all genuine uncoated products, thus:

cases of substitution.

THE
TRADE MARK

'TABLOID'

The word 'TABLOID' is a registered Trade Mark.

The word 'TABLOID' denotes a Burroughs Wellcome & Co. product, and is applied to many classes of products.

The word 'TABLOID' on a package, wherever purchased, ensures supreme and uniform quality.

The word 'TABLOID' on your prescription secures for your patient a product of the same composition and activity always and everywhere.

The word 'TABLOID' may not be used except with reference to a Burroughs Wellcome & Co. product.

BEWARE OF IMITATIONS
