WHAT
YOU
SHOULD
KNOW

ABOUT

--- EYE GLASSES

LENS PRESCRIPTION

Lenses like medicine are compounded from a prescription. Therefore, it is advisable to see your Eye Physician (Oculist) to obtain a prescription for glasses.

OPTICIAN

The next important thing is to select your Optician.

RESPONSIBILITY

We stress the word IMPORTANT because your Optician is responsible for the accurate compounding of your Eye Physician's (Oculist's) prescription.

BARGAINS

Glasses, like clothing, come in assorted qualities. A bargain in gloves is only harmful to your pocketbook. But, a bargain in glasses is dangerous.

QUALITY

Glass for lenses is called Ophthalmic glass and is made from a special formula. Only a

small percentage of this glass is accepted as first quality. Unfortunately the balance is graded as second and third quality and eventually reaches the bargain counter.

OUR EXHIBIT

At the Century of Progress in the Hall of Science we have installed a complete lens grinding plant. There you will see that first quality glass is only a starting point in the making of lenses. You will have an opportunity to see every phase of lens making from the rough lens blank to the finished product.

HOUSE OF VISION

You will see in Motion Pictures just how you "See." How your eyes work under various conditions and how lenses correct eye defects. The eye is a marvelous mechanism and if you view this film, we are certain you will be greatly instructed and we hope entertained at the same time.
