In seeking a keynote for the architectural motif of the Ford building at Chicago this year Albert Kahn, Detroit architect, decided upon the appropriateness of the gear. The result is that the huge central rotunda of the building will resemble graduated internally meshed gears standing ten stories high and measuring 810 feet in diameter at the base. The main entrance of the building is shown.
VENETIAN OF THE AGE BEFORE ROAD TRANSPORTATION

Henry Ford’s private collection of road vehicles, ranging from the earliest Egyptian chariots to the present-day motor car, will be the central feature of the Road Exhibition at the Chicago World’s Fair this year. This unique transportation show will appear in the Grand Concourse of the Fair building now under construction.

The exhibit will include the wooden portions of the display, photographs, and original ceramics of the city.
RECORD SIZE GLOBE TO DRAMATIZE HENRY FORD'S WORLD EXHIBITION

A globe of the world twenty feet in diameter and electrically revolved on its axis will graphically display for the first time the extent of the Ford "world", at the Chicago World's Fair this year. A landscaped court open to the heavens, in the heart of the Ford Exposition building, will form the stage of the globe. Miniatures of Ford plants in glass, electrically lighted, Ford mines and factories will demonstrate to show that the sun never sets on Mr. Ford's multiple activities.
