M 29. Here is depicted in miniature the first Edison Central Station which was constructed in New York in 1882. This is shown as a part of the exhibit of the Electric Light and Power Industry on the second floor of the Electrical Building at the Chicago World's Fair.
M.27 Here is shown a device for demonstrating the value of the electric light as an aid to the detection of small defects in the wall. The amount of light produced by the device is indicated by the reading meter and indicates the detection rate.
