of it very distinctly. I saw him measure it, and it looked very much like it. Of course it has to be produced by some cause, but he did not know then anything about what had produced it.

3. Do you think as a Physician or make the statement, that it was made by lying upon a bedstead on that floor, or on a bedstand would be a very improbable cause for it? I think it would be an improbable cause. I do not think it could be produced either by lying on the floor after death, I think it was an auto-intoxication.

And how many marks do you think there were upon the person of this convict that were produced by an instrument like this [indicating with a slice of something similar to it].
Well, just your recollection?
I know there were a number of bruises.
Was there one?
Yes, there was one that was a mark that one could see the outlines of. About the middle of the instrument that has produced it, but the rest of them, the outlines were not marked. That was the only one that I noticed where the outline was marked.

Let me refresh your recollection and ask you if upon the back and limbs, from your recollection, were there any marks that looked as though they had crossed one another by the application of something of this kind, or some other pressure?

There was quite a number of marks there, but I don't know that any of them were outlined like that one. There was
Imitate your way, keep keen.

quite a number of marks that crossed there, but I do not think there were any that you could measure the outline of the middle of it just exactly like that one. There seems to be one that was prominent.

2. Please state to the Board of Commissioners about where that one mark so clearly defined was upon the body of this person.

I think it was on the left thigh area as about here (indicating about at the lower end of the upper thighs).

2. Was there not a mark similar to that but not as well defined even along on the opposite leg about there? (indicating a point lower down) somewhere, I don’t remember where.

2. Is there any other matter connected with this investigation?

As to the case of a whip or such an anything of that kind that you may desire to state, we think the public demands that you should state to the Board of Commissioners. If so state them fully?

Pursue this, I don't think there is. I brought the matter out as fully as I could at the proper time, and I do not know that there is anything more, and I do not know how I could make the investigation any fuller if I were to do it again.

Did or did you not receive from the Commissioners who were present, and the wardens and all officers of that's institutions every facility, and did they or did they not seem to manifest an interest that the investigation should be full and complete?

If this from the very beginning from yourself Commissioner &c.
In the beginning I believe you were the first man who told me you wanted the investigation to be thorough, and that it should be thorough, and that all facts existing should be brought out. There was a desire that nothing should be covered up—some piece of that.

2. Did they assist in the examination of the different witnesses and suggest any of your questions which were asked by yourself?

I hope sir, the kinds and yourself asks a great many questions and suggested others which I asked, and which the States Attorney asked.

From whom did you receive the first official notice?

I received it from Mr. Maybe, the Deputy Wardor by the hands of Doctor Keizer and Doctor
Dripps.

What was the substance of that?

It was that "a man came to his death, cause unknown." I think "and if you think an investigation necessary, come and attend to it," and at the bottom of the note, the last word is more something to this effect: "I think you had better come up and see about it in the morning."

Did you have a conversation with the Deputy Warden in regard to that matter the next morning? If so, state what it was, in substance?

I did. Before I saw him I went and found the body of the deceased, and I saw marks that aroused my suspicions at once that he had been gagged. I saw that the corners of his mouth were bruised purple and a little bloody, and I asked him almost the first thing when I saw him...
if he had not been gagged. He said he had not been gagged, but he wouldn't say of course, because he was not there at that time, and from hearing gathered many few facts, none to speak of, but they afterwords I went down in his office and in your presence—well we talked sometime before you went in, and I found there that the gag had been used, and as soon as I found the gag had been used and to the extent that it had I thought it was necessary to make an investigation of the case.
