Chicago, April 26, 1899.

My dear President Harper:

To properly appreciate the unique nature of the Gurley collection it should be understood that it was made for the especial purpose of constituting the subject-matter of a great series of works on ancient life. It was the supreme ambition of the author, unfortunately thwarted by failing eye-sight, to prepare a series of superior treatises by means of unrivaled material. Stimulated by this great aspiration he devoted thirty years to gathering the very best material that could be had either by purchase or by personal search. Being a man of some means he spent large sums in securing the cream of many other collections to supplement and perfect those he made personally. As the specimens were intended for scientific description and illustration only the best material was serviceable and hence the collection is phenomenal in the perfection of its specimens. It was only by securing such unrivaled subject-matter that Dr. Gurley hoped to outstrip competitors in the production of monographs on the ancient life of the earth. He was favored by very unusual opportunities. When he began, the country was new and the deposits unculled. In addition to this there were numerous local enthusiasts who, stimulated by the freshness of the field, gathered much new and choice material in their several localities. Many of these later passed away or lost their enthusiasm and much of their choicest material was procured by Dr. Gurley who had the advantage of personal
My dear President Hepburn:

To properly appreciate the unique nature of the author's collection it seems to me essential that
it was made for the specific purpose of collecting the
subject-matter of a great series of works on mental life.
It was the supreme ambition of the author, unmistakably
transmitted in all the notes of the author's shorthand
extracted from various of his manuscripts. He wrote:

"The great ambition of our group is to master the
very best material that can be had either by purchase or
by personal research. To be a man of some means is a
great advantage in accomplishing the aims of such a
collection."

He was so impressed by the potential of this
material that he set out to collect it himself. He was
fascinated by the possibility of using this material to
understand the nature of the mind. He believed that
by very careful selection and analysis, he could come
to new and significant conclusions about the human
condition.

He was so determined to be thorough in his
research that he gathered material from all over the
world. He collected extracts from various sources,
noting down every detail with care and precision.

He was driven by a deep curiosity about the
nature of the mind and the way in which it works. He
wanted to uncover the secrets of the mind, to
understand the way in which our thoughts and
feelings are formed. He was determined to

accomplish his goal, and he undertook the
responsibility of pursuing it.
acquaintance and often of intimate association with them. These favorable conditions will not again be offered and there is no reasonable hope that the collection can be duplicated.

The collection is estimated to contain about 75,000 specimens, embracing about 14,000 entries, each entry representing either a separate species or separate localities. It contains much new and undescribed material which will yield rich scientific returns when properly studied. This new material will undoubtedly throw important light on many points now in doubt and it may be hoped confidently that it will make entirely new revelations respecting the former life of the globe.

This may be anticipated the more confidently because some parts of the collection have already been in the hands of Shumard, leading experts such as Hall, Owen, Wachsmuth, Springer, Cope, White, and Miller, and have proved very rich in scientific value. 570 new species have already been described and the type specimens on which the descriptions were founded have thereby come to possess a very high value as they are the standard of comparison and the highest court of approval in all disputed questions pertaining to the species.

So superior is this collection that no scientist can safely publish monographs on the many leading types embraced in it without having first studied its material, and hence it is almost indispensable to the highest class of work in these lines. Its possession would place incalculable advantages in the hands of the geological and biological faculty and the advanced students of the University of Chicago.
The Mississippi valley is sure to become classic ground for the determination of the earlier half of the earth's history because nowhere else is there such a symmetrical development on so grand a scale. The Gurley collection has been chiefly made from this unparalleled series of formations, and if placed in the most vigorous institution in the heart of this representative area and properly used and augmented, would serve a purpose in the promotion of science and of a higher education unsurpassed, if not unequalled, by any similar collection.

Very respectfully yours,

(Signed) T. C. Chamberlin.
The Methodist General Meeting for the determination of the earlier part of the Society's history

for the determination of the earlier part of the Society's history

became necessary in order to frame such a systematic development

of the General Collection as may have been essential in so great a scale. The General Collection has been adequate

made from time immemorial serves as a reminder, and if pleasing

in the most vigorous initiative in the first or last instance

calling upon and properly meet any encouragement, many since a

unmistakably to her immediate, or any similar collection.

Very respectfully yours,

(Sealed) T. G. Campbell
In the spring of 1897, Wm. F. E. Gurley retired from the position of State Geologist of Illinois. At that time Mr. Gurley possessed a palaeontological collection larger and more valuable than any similar collection of any American institution of learning, or of any private collector. The assembling of this collection was the result of nearly thirty years of earnest effort on the part of Mr. Gurley.

Being possessed of this collection, a practically complete working palaeontological library, a home, and a competency, it was Mr. Gurley’s intention to devote the remainder of his life to palaeontological research.

At the age of seventy, Mr. Gurley had an attack of measles which rendered him totally blind for several months. He partially regained his sight, but only to the extent of about fifty per cent of normal.

During his four years as State Geologist, he published a number of technical bulletins, the preparation of which, and the proof reading incident thereto, taxed his eyes to an unusual extent.

In the summer of 1897, Mr. Gurley consulted an eye specialist, who after a careful examination, informed Mr. Gurley that it was but a mere question of time until he would again be blind, and that he had better arrange his affairs in order to accommodate himself to the inevitable.

Thus it was, that Mr. Gurley was compelled to lay aside his ambitions and arrange his affairs for the “new order of things,” which he would be compelled to accept. In this, he considered plans for disposing of his palaeontological collection. Of the several institutions endeavoring to interest Mr. Gurley in their behalf, there were two which from a monetary point of view were particularly impressive. One of these was Leland Stanford University, which however was not able at that time to take any decided action, because of the uncertainty as to the outcome of certain legal matters connected with the United States Government, and the railroad interests formerly owned by Leland Stanford. The other, was an English institution, in whose behalf a well-known English financier was endeavoring to purchase this collection, for one hundred and twenty-five thousand dollars.

At this time Mr. William R. Head, Personal Injury Agent for the Illinois Central Railway, who for many years had been on friendly terms with Mr. Gurley, learned of the possibility that Mr. Gurley’s collection would be sold, and he at once took steps to induce Mr. Gurley to hold the matter in abeyance to the end that the collection might be acquired by some Chicago institution of learning, mentioning specifically The Field Columbian Museum, The University of Chicago, and the Chicago Academy of Science. Mr. Head, William Penn Nixon, Editor of The Chicago Inter Ocean, and George C. Walker, a Trustee of The University of Chicago, took it upon themselves to act as a self-appointed committee and began a campaign intended to eventually secure Mr. Gurley’s collection for one of the three Chicago institutions named above. In the fall of 1897 The Chicago Inter Ocean published a series of illustrated articles, with a view to interest some one to furnish the funds for the purchase of Mr. Gurley’s collection.

In the winter of 1897-8, Mr. Head and Mr. Walker brought Mr. Gurley into personal contact with Dr. Harper, President of The University of Chicago, and Dr. Chamberlin, head of the Department of Geology, of that institution. For a period of about a year negotiations with the University of Chicago were in the nature of “talks”, and discussions, all of which were along lines appealing to Mr. Gurley to favor an institution within his adopted state. These talks and assurances appealed to Mr. Gurley, because he was led to believe that it would be possible, with his collection as a nucleus, to eventually build up a Department of Geology at The University of Chicago, which would in every way eclipse any similar department in the world.

These informal negotiations led up to the first written agreement, dated April 27, 1899, between The University of Chicago and Wm. F. E. Gurley, as follows:
IT IS HEREBY AGREED by Dr. W. F. E. Gurley and President W. R. Harper and Secretary T. W. Goodspeed of the University of Chicago that if the President and Secretary will procure on behalf of the University, before the 1st of next September, $50,000 toward the purchase of Dr. Gurley’s geological collection, the price of which is $125,000, Dr. Gurley will donate to the University the remaining $75,000, and upon the payment of said $50,000, to said W. F. E. Gurley the collection will thereby become the property of the University.

IT IS FURTHER AGREED that the President and Secretary will use their utmost endeavors to induce the donor or donors of the $50,000 to agree to contribute a sum not to exceed $1000 annually for ten years to be used by Dr. Gurley in the purchase of material to be added to the collection.

Wm. F. E. Gurley
William R. Harper
T W Goodspeed

(The above agreement is written upon the printed letterhead of the Department of Geology, The University of Chicago.)

The University of Chicago was unable to meet the terms of the above agreement, and at the urgent request of Dr. Harper, and Dr. Chamberlin, the following agreement was entered into on September 12, 1899:

IT IS HEREBY AGREED by Dr. W. F. E. Gurley and President W. R. Harper and Secretary T. W. Goodspeed of the University of Chicago that if the President and Secretary will procure on behalf of the University, before the 1st of January, 1900, $50,000 toward the purchase of Dr. Gurley’s geological collection, the price of which is $125,000, Dr. Gurley will donate to the University the remaining $75,000, and upon the payment of said $50,000, to said W. F. E. Gurley the collection will thereby become the property of the University.

IT IS FURTHER AGREED that the President and Secretary will use their utmost efforts to induce the donor or donors of the $50,000 to agree to contribute a sum not to exceed $1000 annually for ten years to be used by Dr. Gurley in the purchase of material to be added to the collection.

Wm. F. E. Gurley
William R. Harper
T W Goodspeed

(The above agreement was written upon the letterhead of the “Office of the Secretary and Registrar”, The University of Chicago.)

The foregoing agreement expired on January 1, 1900. In urging Mr. Gurley to make a new agreement, whose terms would be more favorable to the University of Chicago, Dr. Harper proposed:

1st. To pay Mr. Gurley twenty-five hundred dollars per annum during his life time; and nine hundred dollars per annum to his wife, after his death, should she survive him; and in addition thereto

2nd. To name the paleontological museum in honor of Mr. Gurley, and make him the Director thereof for life, with a suitable compensation for his services; such position carrying with it all the rights and privileges accorded to members of the faculty of the University of Chicago. Because of his belief that such “glorification” of his name might possibly deter others from contributing to the upbuilding of the museum, Mr. Gurley declined the proffered honor. Realizing that as the head of the museum, he might eventually be a bar to the advancement of others, Mr. Gurley declined the position of Director, and agreed to accept the less important position of Associate Curator in paleontology for life, with a nominal salary of three hundred dollars per annum; it being understood that as an administrative officer of the museum he would enjoy all of the rights and privileges accorded other members of the faculty of The University of Chicago; and also

3rd. That Dr. Harper would use his best endeavors to place the sum of five hundred dollars per annum at the disposal of the museum for the acquisition of new paleontological material, and that Mr. Gurley during his life time, would direct the use thereof.
The foregoing arrangements were briefly outlined in the two following agreements, dated respectively January 1st, and 2nd, 1900. The agreement dated January 1st was not signed by Mr. Gurley until January 2nd, at which time Dr. Harper formulated his agreement dated January 2nd, which was hurriedly drawn, as he was about to depart for New York City. These two agreements were as follows:

It is agreed between Dr. W. F. E. Gurley and William R. Harper, that the latter will recommend to the Board of Trustees the purchase of the complete palaeontological collection of Dr. Gurley, on the basis of a price of One Hundred and Twenty Five Thousand Dollars ($125,000.00), of which Mr. Gurley contributes Seventy-Five Thousand Dollars ($75,000.00), with the understanding that the University will enter into a contract to pay Dr. Gurley a sum amounting to 5% income upon Fifty Thousand Dollars ($50,000.00) each year during his life time, said payments to be monthly, and in case the wife of Dr. Gurley should survive him, the payment of the sum of Nine Hundred Dollars ($900.00) payable monthly during her life time. It is understood that if this agreement is not ratified before January seventeenth it is not binding on either party.

William R. Harper, President
Wm. F. E. Gurley
January 1st, 1900.

It is understood between William R. Harper and Dr. W. F. E. Gurley that Mr. Harper will recommend from time to time, so far as it may lie in his power to secure the appropriation, a sum not to exceed $500, a year for additions to the Gurley collection, should such collection become the property of the University, and that for work which Dr. Gurley shall do in connection with the collection, whether at the University or away from the University, he shall receive during his life time the sum of $300, a year payable monthly. It is understood that this agreement does not bind the Board of Trustees.

William R. Harper
January 2d, 1900.

Immediately after executing these agreements, Dr. Harper went to New York City, and arranged with Mr. Rockefeller whereby the matter was definitely settled, in accordance with the final understanding agreed upon between Dr. Harper and Mr. Gurley.

Under date of January 6th, 1900, Dr. Harper sent the following telegram from New York City:

To Prof. Thomas C. Chamberlin, Room 600, Hyde Park Hotel, Chicago. Gurley arrangement approved heartily pleased send him word. William R. Harper.
(The above telegram was handed to Mr. Gurley by Dr. Chamberlin.)

Pursuant to the foregoing, on January 17, 1900, the following agreement was executed:

THIS AGREEMENT made this seventeenth day of January, A.D. 1900, between William F. E. Gurley, of Danville, Illinois, party of the first part, and The University of Chicago, a corporation under the laws of Illinois, party of the second part, WITNESSETH, that whereas, the party of the first part is possessed of a certain palaeontological collection — consisting of more than seven hundred thousand (700,000) specimens — now located in the City of Danville, Illinois, and which is the collection relative to which conferences have lately been had between said Gurley and Messrs. William R. Harper, the President, and George C. Walker, one of the Trustees of said University, and has lately been viewed and examined on behalf of said University, by Mr. Stuart Weller,

AND WHEREAS, said Gurley values said collection at the sum of One Hundred and Twenty-five thousand Dollars ($125,000) and said University desires to acquire the same, and said Gurley desires to transfer and convey said collection to said University, upon the terms and for the price hereinafter named,
THEREFORE, this instrument witnesses that in consideration of the mutual undertakings hereof, it is hereby covenanted and agreed between the parties hereto as follows:

1. The party of the first part hereby sells, transfers and conveys to the party of the second part hereto, all of the said palaeontological collection above referred to and described, and agrees to deliver the same (at Danville, Illinois) to the party of the second part, by good title, clear of all liens and encumbrances whatsoever, within ten (10) days from the date hereof.

2. The party of the first part hereto covenants and guarantees to the party of the second part, its successors and assigns that at the encasing and delivery of this instrument the party of the first part hereto is the full and sole owner of all of said palaeontological collection, and has good right and full authority to sell and convey the same and that said collection is fully paid for and that there are no liens, claims or demands against said collection, or any part thereof.

3. As and for the purchase price for said collection said University covenants and agrees to pay, and shall pay to said Gurley the sum of Twenty-Five Hundred Dollars ($2500) for each year of the natural life of said William F. E. Gurley, after the date of this instrument, and in case Anna S. Gurley, the wife of said William F. E. Gurley, shall survive said William F. E. Gurley, then said University shall, and hereby covenants and agrees to pay to her the sum of Nine Hundred Dollars ($900) for each and every year of her natural life after the death of her said husband, William F.E. Gurley, said payments of $2500. per year during the life of said William F. E. Gurley and $900 per year to said Anna S. Gurley after the death of her said husband, if she survives him, shall be made in equal half-yearly payments, that is to say, the first payment of $1250 shall be made to said William F. E. Gurley upon the delivery of said collection according to the terms hereof, and the second payment to him shall be made on July 17, 1900, and so on during the remainder of his life he shall receive on the seventeenth day of January and the seventeenth day of July of each respective year the sum of $1250, and after his death, if his said wife, Anna S. Gurley, shall survive him, then during the remainder of her life, she shall, at half-yearly intervals, receive the sum of $650, the first payment to be made on the day on which her said husband would have received his next half-yearly payment if he had remained in life. The said payments shall, at the election of the party from time to time entitled thereto, be made in gold coin of the United States of America, of the present or an equal standard of weight and fineness.

4. All of said payments shall be made at the office of said University, in the City of Chicago, or at such other place as the said University and the party entitled to payment hereunder, shall from time to time mutually agree upon.

5. Said William F. E. Gurley, as hereinabove stated, values said collection at $125,000, and donates to said University the whole value of said collection over and above the aggregate of the sums of money to be paid to him and to his said wife if she survives him under the terms of this contract, and for the sake of clearness it is expressly stated and agreed that no payments whatever are to be made by said University for or on account of said collection, other than said semi-annual payments to said Gurley and to his said wife, if she shall survive him, all as hereinabove expressly provided for, and said payments shall not bear interest.

IN WITNESS WHEREOF the party of the first part has hereunto set his hand and seal and the party of the second part has hereunto caused its corporate name and seal to be set by its duly authorized officers, the day and year above written.

(Execution in duplicate.)

Note. The words "at Danville, Illinois" written upon 1st page Section 1, Line 4, were interlined before signing this agreement.

Wm. F. E. Gurley (Seal)

THE UNIVERSITY OF CHICAGO,

By Andrew McLeish, Vice President of its board of Trustees.

ATTEST:

Thomas W. Goodspeed

Its Secretary.

(Seal of The University of Chicago impressed.)
It will be noted that in the foregoing agreement no provision is made for Mr. Gurley's official connection with the University, as Associate Curator of Palaeontology; the salary as such of Three Hundred Dollars per annum; nor the Five Hundred Dollars to be annually used under the supervision of Mr. Gurley in adding to the palaeontological collection. While all of these things were a part of the final agreement upon which was based the January 17th contract, Dr. Harper thought it might be better that they take the usual course, and with the assurance that in this manner these matters would be satisfactorily arranged, Mr. Gurley consented thereto. As a matter of fact, Dr. Harper arranged all of these matters, in accordance with the understanding, and from that time Mr. Gurley has been Associate Curator in Palaeontology, with a salary of Three Hundred Dollars per annum, and has been accorded the same consideration given to other members of the faculty of The University of Chicago. Dr. Harper also provided for the annual expenditure, under Mr. Gurley's supervision, of Five Hundred Dollars for additions to the palaeontological collection.

Under date of January 23, 1900, the Comptroller of The University of Chicago wrote Mr. Gurley, as follows:

Mr. Wm. F. E. Gurley
6153 Lexington Ave.
Chicago

Dear Sirs:

As the Articles of Agreement between yourself and The University of Chicago heretofore you convey to The University a certain palaeontological collection located in Danville, Ill. have been executed upon the part of both parties the matter would seem to be in readiness for complete consummation by the delivery upon your part of the collection to The University.

It has been arranged that Mr. Waller as representative of The University shall proceed to Danville and together with yourself arrange for the packing and shipping of the collection to The University at Chicago. Mr. Waller awaits your readiness to proceed to Danville and upon notification will join you and receive the material from your hands on account of The University.

Will you kindly advise me of your wishes in the matter, meanwhile and holding ourselves in readiness to conform to your wishes, I remain

Yours truly

H. A. Rust.
Comptroller.

(The above letter was written on the letterhead of the "Office of the Comptroller" of The University of Chicago.)

Pursuant to the agreement of January 17th, and the letter of Mr. Rust, Mr. Gurley and Mr. Waller, immediately went to Danville, Illinois, and packed the palaeontological collection of Mr. Gurley, which was on January 27th, 1900, formally accepted by the authorized representative of The University of Chicago, who gave Mr. Gurley the following receipt:

Danville Ill. Jan. 27th 1900

This is to certify that Wm. F. E. Gurley has this day delivered to me as the representative of the University of Chicago his entire palaeontological collection (and duplicates) in accordance with the provisions of his agreement with said University dated Jan. 17th 1900

Stuart Waller.

Since he became connected with the University of Chicago in 1900, Mr. Gurley's name has appeared in The President's Address Book as "An Officer of Administration", and at Mr. Gurley's request he was not also designated as "a donor" - Mr. Gurley not wishing to make himself thus conspicuous in a group (faculty) of whom so few were donors.
When Mr. Gurley gave his collection to The University, he expressed the hope that the Department of Geology and Paleontology of The University of Chicago would eventually develop an equipment, and prestige superior to that of any similar department elsewhere. This hope has been more than realized.

Due to loss of sight, Mr. Gurley has been unable to do technical scientific work since he became connected with the University. He has however been active in behalf of the Museum, having been instrumental in securing the palaeontological collections formed by Mrs. Mary P. Riney, of Richmond, Indiana; Charles Faber, of Cincinnati, Ohio; F. A. Sampson, of Sedalia, Missouri; and James Hall, of Albany, New York.

In 1870 Mr. Gurley began a friendly acquaintance with William C. Van Horn, then living in Illinois, who later became a resident of Montreal, Canada. This friendship; the importunities of Mr. Gurley, and the fact that the latter had given his collection to The University of Chicago, were important aids to Professor Weller in securing, as a gift to The University, the fine palaeontological collection of Sir William Van Horn.

The Five Hundred Dollars per annum, provided for in the January 2nd, 1900, agreement with Mr. Gurley, has almost entirely been used in assisting the late Dr. Williston, and since his death, Mr. Paul Miller, in collecting vertebrate fossils of the western states. The results have been most gratifying, as the Department of Palaeontology has thus been placed in possession of a most remarkable and complete collection of vertebrate fossils of the Permian period. It is indeed marvelous, that so much has been accomplished with so small an expenditure, and both Dr. Williston, and Mr. Miller, are entitled to great credit therefor.

For twenty-five years Prof. Weller has spent his summer vacations in geological field work. He has thus secured a great quantity of valuable palaeontological material, all of which has been given to The University. Mention of this is here made because this material has been an important factor in building up the palaeontological collection.

Thus Mr. Gurley's Collection, with the various aforementioned additions thereto, ranks as one of the greatest palaeontological collections in the world, and places the Department of Geology of The University of Chicago, far in the lead of that of any other educational institution.

In refusing One Hundred and Twenty-five Thousand Dollars for his collection, and presenting it to The University of Chicago, Mr. Gurley was influenced by the high esteem in which he held Dr. Chamberlin; the pleasing personality and assurances of President Harper; and the belief that such a course would be of incalculable value to science and education. He has at all times been deeply interested in the welfare of The University; and his attitude has been one of hearty co-operation with those having in charge the Department of Geology and Palaeontology.

To be backed by knowledge and belief is an assurance of success.

Jan 26 1926,

[Handwritten note: "To be backed by knowledge and belief is an assurance of success."

[Handwritten note: "Recital of the Early History of the Palaeontological Collection"]

[Handwritten note: "C. C. Chamberlin"]
From my personal knowledge of the facts in the case, I entirely agree with Dr. Chamberlin as to the correctness and completeness of his most valuable historical record.

Thomas W. Goodspeed

From my knowledge of the circumstances connected with the acquisition of the Euryli Collection of fossils by The University of Chicago, I can assert that the foregoing account is correct.

Stuart Weller
It is understood between William R. Harper and Dr. W. F. E. Gurley that Mr. Harper will recommend from time to time, so far as it may lie in his power to secure the appropriation, a sum not to exceed $500 a year for additions to the Gurley collection, should such collection become the property of the University, and that for work which Dr. Gurley shall do in connection with the collection, whether at the University or away from the University, he shall receive during his lifetime the sum of $300 a year payable monthly. It is understood that this agreement does not bind the Board of Trustees.

William R. Harper

Checks similar to the above have been received semi-annually by Mr. Gurley since January 1900. The University of Chicago has given these checks pursuant to the agreement made between Dr. Harper and Mr. Gurley, in January 1900.
December 11th, 1907.

Mr. L. S. Tiffany,
C/o O. W. Richardson & Co., Wabash & Congress Sts.
Chicago, Ill.

My dear Sir:-

I beg to express my appreciation of the gift to the University of the collection of fossils collected by your father, and which has been duly turned over to the Department of Geology in Walker Museum. This gift will be of value to the scientific work of the University and will be duly acknowledged.

My understanding is that your children may receive twelve quarters' tuition credit in the colleges of the University and may be assigned to one for the entire period of twelve quarters or to different ones as may be convenient to yourself. A memorandum to this effect will be filed with the Registrar of the University and you can avail yourself of it whenever desired.

Again thanking you for the gift, I am

Very truly yours,

H. P. Judson
Dear Sir:—

In my letter relating to the Van Horne Collection of fossils, mention was made of two notable collections which I hope to be able to secure as gifts to the University. The first and most important of these collections is the Springer Collection of crinoids, which is preeminently the greatest collection of this group of organisms in the world. This collection is the basis of Wachsmuth and Springer's monograph upon the Crinoidea Camerata, and is being used by Mr. Springer as the basis for the preparation of monographs upon the other two orders of crinoids. I am personally on very pleasant terms with Mr. Springer and have talked with him in regard to the placing of the collection in the Museum of the University of Chicago. The reasons why I feel that the collection can be secured here are as follows:

1) We already possess a large and important crinoid collection, among which are the types or figured specimens of over 450 species. We have, next to the Springer Collection, the most important one in the country, and there is no collection in any public museum which will supplement the Springer Collection more completely than our own.

2) Besides Mr. Springer, there is no one living in the country today who has made a special study of the crinoids except myself. The monographic work which Mr. Springer has outlined is a larger task than he will ever be able to bring to completion, and I feel sure that the
DEAR MRS. HUBBARD,

I am writing in behalf of the Van Horne Collection of Forensics to mention the many valuable contributions and support the University of Illinois and the Spencer Collection of Forensics, which has been most important to the history and development of the Spencer Collection at the University of Chicago. The collection contains a large number of specimens and documents that are of great importance in the field of Forensics. The collection is housed in the Van Horne Forensic Laboratory and is open to students and researchers.

I was very pleased to hear from Mr. Hubbard that the Forensic Collection can be received here as a temporary resident of the University of Illinois. The collection, which includes a large number of important forensic artifacts, was recently transferred from the Van Horne Collection to the Spencer Collection, the most important one in the country. It is clear that the collection is in good condition and will continue to be a valuable resource for students and researchers.

Mr. Van Horne, who has made a great contribution to the field of Forensics, has been instrumental in the formation of the Spencer Collection. His work will no doubt continue to shape the future of the field.

I am confident that the Spencer Collection will be a valuable addition to our institution.

Sincerely,

[Signature]
way can be opened for me to associate myself with him in the work. Such an arrangement, with the publication of the monograph by the University would, I am sure, bring the collection to us.

As I have already stated, this collection is preeminently the greatest in the world, and its valuation may be easily placed at $150,000.00.

Another collection with which I am in close touch, and which I believe can be secured as a gift from its present owner to the University, is the collection of Mr. E. E. Teller of Milwaukee, Wisconsin. This is a local collection of about equal value with the Van Horne Collection, and contains much material which will be of great value to us.

In the building up of a great collection of invertebrate fossils, these local collections are of inestimable value. They represent the diligent collecting of thirty or more years, and they can never again be duplicated. During the next decade, most of the important local, private collections will find their way into public institutions, and the localities which have been famous in the past will never again furnish such material as has already been collected. Most of these important fossil localities in the Ohio and Mississippi valley region are now nearly or quite exhausted. A collection in zoology or botany can be made as easily twenty-five years hence, but in paleontology the next ten years will decide where the great collections will be. We already have in Walker Museum one of the three or four largest and most important invertebrate collections in America, and we should be able to lead them all in the near future. Since the acquisition of the Surley Collection we have purchased two important collections, the Sampson Collection and the Faber Collection,
In the planning of a great college of the future we must keep in mind that the present college of today is but a part of the educational process. The importance of the college as an institution of higher education cannot be overestimated. It is an essential part of the system of American education. Since the establishment of the University of California in 1868, we have progressed two important colleges: the San Francisco College and the Berkeley College. Previous colleges have not been satisfied with the mere existence of a college; they have sought to make it the center of learning and culture. They have striven to make it a place where students can develop their minds and character. This is the true function of a college, and it is one that we must continue to strive for.
and to these may be added the Van Horse Collection, now on its way to Chicago. None of these collections have been unpacked, and a large portion of the Gurley Collection also remains packed in the boxes in which it came to Chicago. A large amount of additional drawer space is needed for the accommodation of these collections, and in the near future one entire floor in Walker Museum should be given up to the collections in invertebrate paleontology.

Under the present arrangement the curator of these collections is employed for but one-half the year by the University. The collections in his charge have become far too large and too important and of too great value to be left for six months of the year with no one to look after them. It is important that some arrangement should be made by which it would not be necessary for the curator to devote one-half of each year to work outside the University. Furthermore, no material progress can be made toward carrying out the plans indicated for securing the Springer Collection as long as the necessity remains for the curator to seek employment outside the University.

The curator should also be given some assistance in the labor of cataloguing and installing the collections. If only some student assistance could be had regularly for the time being, it would be a very great aid in the progress of the work.

I have the pleasure of transmitting this through the hands of the Director of the Museum, and with his cordial approval.

Yours truly,

President W. R. Harper,

The University of Chicago.

Stuart Wellar
I have the pleasure of transmitting the foregoing information to the Directors of the Museum, and with the cordial approval,

Yours truly,

President A. W. Herbst.

The University of Chicago.
(Suggestion as to letter of thanks.)

Honored Sir:

The Board of Trustees of the University of Chicago desire to express their profound appreciation of your generosity in presenting to Walker Museum your very valuable collection of fossils. They recognize in this gift a token of your kindly feeling toward the University, and toward education and research in that portion of our great land where your early activities in science, in culture and in affairs were signallized by most eminent success. They appreciate the compliment you pay to the department to which your collection will prove an invaluable aid. They congratulate science on this recognition of its mission and this contribution to its progress. With a deep sense of the value of your gift, they beg to convey to you their warmest thanks.

With great respect and appreciation, we are

Very sincerely your debtors,

Sir William Van Horne,

Montreal, Canada.

President of Board of Trustees.

President of University.

Secretary of Board of Trustees.
Honorable Sirs:

The Board of Trustees of the University of Chicago gratefully acknowledges the recommendations of your Advisory Committee in regard to the University's personnel policies and practices, and welcomes your suggestions for the improvement of our University's administration, personnel policies, and practices. We are grateful for your time and energy in undertaking this comprehensive study.

The Board of Trustees has taken under consideration the suggestions made by your Committee, and will endeavor to carry them into effect as expeditiously as possible.

With a deep sense of the value of your work, we are confident that the recommendations will prove an invaluable aid to the University in its efforts to maintain its high standards.

Very sincerely yours,

[Signature]

President of Board of Trustees

Secretary of University

[Signature]

President of University
Dear Sir:

In the acquisition of the Van Horne Collection of fossils, the University has come into the possession of an exceedingly valuable addition to its already large collection of fossils. A large portion of this collection was made from our local geological formation, the Niagaran limestone in northeastern Illinois and southeastern Wisconsin, which gives it an especial value to the University. Another important portion of the Collection is from the St. Louis limestone near Alton, Illinois. These portions of the Collection, along with a large amount of miscellaneous material, have been packed and are now on their way to Chicago from Montreal. Another very valuable portion of the collection, consisting of a great mass of Carboniferous fish remains, among which are many type specimens, is in Topeka, Kansas, in the possession of Mr. Orestes St. John, who used the material in the preparation of his reports on the Carboniferous fishes for the geological Survey of Illinois. It is the intention of the donor that this collection of fish remains shall come to the University with the rest of the collection, and he will take steps to have it transferred to Chicago as promptly as possible. Although it is not easy to place a money value upon such a collection as this one, it is believed that a valuation of from twenty to twenty-five thousand dollars is not excessive.
In the association of the new home collection of fossils, the
university has come into the possession of an association ample
addition to the existing large collection of fossils. A large portion
of the collection is made from our local geological formation, the
McKee's Museum, and our own geological formations.

Another advantage of its collection is the unique value to the University. Illinois.
These portions of the collection work with new After Illinois, these portions of the collection, from the new
Recent Cretaceous of Illinois, who need the material in
the formation of the Cretaceous of Illinois. These parts of the Cretaceous forms for the
question of the geology of the Cretaceous forms for the
geology of the University. It is the intention of the donor that
the University shall make a donation of the collection necessary to make the collection
and to help the student to learn it. Although it is not easy to place
a collection of fossils to thirty-five thousand, it is not
necessary.
The Van Horne Collection is presented to the Walker Museum of the University by Sir William Van Horne of Montreal. Although the donor is a citizen of a foreign country, he is a native of Illinois and a former resident of Chicago, and his collection being in large part from Illinois localities, he has recognized that no more appropriate place could be found for it than the museum of the University of Chicago. This collection is the first notable collection of fossils which has come to the University as a gift outright, and in view of rendering aid in securing at least two other notable collections, with which we are already in touch, it is important that the University take steps promptly toward the proper installation of the material of this and other collections in its possession. Furthermore, it is but just to the donor of the Van Horne Collection that it should be made available for use. Both Sir William and members of his family have now a feeling of part ownership in the University. They are not infrequent visitors in Chicago, and have expressed the desire and intention of paying a visit to the Museum at no far distant day. It would be embarrassing to say the least if upon such a visit from any of them the Van Horne Collection was buried away in the basement, not even unpacked from the boxes in which it was transported to Chicago.

There is not an empty drawer available today in the Museum, for we are opening up the collection, but there are 500 empty drawer spaces in the cases in the Museum. Our standard drawers cost approximately $1.00 each in lots of 500, and it is desirable that $500 be made available at once for use in securing this number of drawers.
The new Home College is based at the University of Sheffield. It is named after William Harvey, a prominent figure in the field of medicine and physiology. The college is dedicated to advancing the understanding of the human body and its functions through a combination of cutting-edge research and innovative teaching methods.

The University of Sheffield, known for its strong emphasis on research and development, is home to a number of prestigious institutions, including the Sheffield Institute of Translational Medicine. The new College of Medicine, Dentistry, and Health will be housed within this institute, with a focus on fostering interdisciplinary collaboration between scientists and clinicians.

The college's curriculum will be designed to prepare students for careers in medicine, dentistry, and health sciences, with a strong emphasis on real-world applications and hands-on experience. Students will have access to state-of-the-art facilities, including laboratories, clinical simulation centres, and research laboratories.

In addition to the traditional medical sciences, the college will also offer programmes in allied health professions, such as nursing, pharmacy, and physiotherapy. This will enable students to gain a comprehensive understanding of the healthcare system and develop the skills needed to deliver high-quality care.

The new College of Medicine, Dentistry, and Health is expected to have a significant impact on the local economy, with the creation of hundreds of new jobs in research, teaching, and administration. It will also contribute to the city's reputation as a leading centre for medical research and education.

The opening of this new college is a significant milestone for the University of Sheffield, as well as for the wider scientific community. It is a testament to the university's commitment to excellence and innovation, and a clear indication of its dedication to the future of medical education and research.
It is also desirable that the curator of these collections be granted some assistance in the task of cataloguing and caring for the collections in his charge. If it were understood that two students could be regularly employed to assist in the Museum, to be paid by the remission of their tuition, very much more rapid progress could be made in the installation of the collections.

I have the pleasure of transmitting this through the hands of the Director of the Museum, and with his cordial approval.

Yours truly,

Stuart Weller

President W. R. Harper,

President of the University.
It is also germane that the committee of the collection
be granted some assistance in the form of consultation and advice on
the allotment in the college. It is here understood that two
subscribers could be regularly employed to assist in the process and to be
bought by the examination of their collection, who may spear more easily proceedings
concerning the future of the establishment of the collection.
I have the pleasure of transmitting this information to your knowledge and
the pleasure of the humane and with the greatest satisfaction.

Yours truly,

[Signature]

President of the University.

J. Walker's Scrap Book
It is agreed between Dr. W. F. E. Gurley and William R. Harper, that the latter will recommend to the Board of Trustees the purchase of the complete paleontological collection of Dr. Gurley, on the basis of a price of One Hundred and Twenty Five Thousand Dollars ($125,000.00), of which Mr. Gurley contributes Seventy-Five Thousand Dollars ($75,000.00), with the understanding that the University will enter into a contract to pay Dr. Gurley a sum amounting to 5% income upon Fifty Thousand Dollars ($50,000.00) each year during his lifetime, said payments to be monthly, and in case the wife of Dr. Gurley should survive him, the payment of the sum of Nine Hundred Dollars ($900.00) payable monthly during her lifetime.

It is understood that if this agreement is not ratified before January seventeenth it is not binding on either party.

[Signatures]

January 1st, 1900.
It is understood between William R. Harper and Dr. W. F. E. Gurley that Mr. Harper will recommend from time to time, so far as it may lie in his power to secure the appropriation, a sum not to exceed $500. a year for additions to the Gurley collection, should such collection become the property of the University, and that for much work which Dr. Gurley shall do in connection with the collection, whether at the University or away from the University, he shall receive during his life time the sum of $300 a year payable monthly. It is understood that this agreement does not bind the Board of Trustees.

William R. Harper

Regarding

Date

SEE

Name or Subject: Chamberlin, T. C.

Williston, S. W.

File No.
Preliminary report on the expedition from the Palaeontological Department, spent the time from April 19 until June 20 off this year in the Permian region of Texas, the region lying in the valley of the Big Bend and Little White rivers in Welder, Archer, and Baylor counties. Eight weeks of this time was spent in actual collecting, the remainder being consumed in necessary traveling.

The party consisted of myself with my men as driver, cook, etc., with a wagon, team and all necessary camp equipment.

The party collected over 1,000 lbs. of fossil bones of the extinct reptiles and amphibians of the Permian, all about 300 individual specimens, including some of exceptional value, with from their rarity and perfection of preservation.

A couple of weeks curtailment of the trip as originally planned enabled the collection to be made within the amount appropriated. A report of expenses has been submitted to the Comptroller.

In comparison with other collections, this expedition has been very successful.

Respectfully,

D. Case 19th in Palaeontogy.
Chicago, June 21st, 1898.

President W.R. Harper,

Dear Sir:—

For the continuation of the work in Palaeontology, Professor Williston of the University of Kansas, seems to be a very fit and desirable man. Dr. Case has done admirably this winter in his lectures, as far as I can learn, but it would be wiser to put the conduct of the department in the hands of a man of proved abilities.

I trust that the department will be continued in good shape, and that the arrangements will be toward a definite end and not merely temporary.

Yours very truly,

Henry M. Donaldson

P.S. What does M. Chauvel say to Millin?
My Dear President Harper:—

Replying to the enclosed, I beg to say that I have a very favorable opinion of Professor Williston. I think that he stands well in the judgment of scientific men and that he has been successful in awakening enthusiasm as a teacher. Of the men who have reached maturity and are probably available he is perhaps the most desirable.

I have come to have a very favorable opinion of Dr. Case's abilities. His recent lectures here have led me to think he is likely to be a man of the first order for a University position. He seemed not only to command his subject but to be able to present it with clearness and effectiveness. Among other merits he exhibited a quality which is rare among young lecturers and none too common among experienced ones—the faculty of apportioning his matter to his time. While his lectures were given extemporaneously he seemed to treat all parts of his subject with due proportionate attention and still to reach an end with extension or curtailment at the close of the hour. I notice also that his scientific work is beginning to receive recognition in different quarters. I should not be surprised if ten years hence he should be one of the stars of the first magnitude in vertebrate paleontology.

Very truly yours,
In your previous letter:

Re: 800, 790

I have come to have a very favorable opinion of the Cth.

I have come to have a very favorable opinion of the Cth.

Please fill in the blank:

Yes, I have come to have a very favorable opinion of the Cth.

Yes, I have come to have a very favorable opinion of the Cth.

The University of Chicago
My Dear President Harper:–

After pondering over the subject raised by the letter recommending Professor Williston, the feeling has been growing strongly upon me that it is time to select some readjustment of department relations to secure the conditions prerequisite for success in building up his courses should be reached before an engagement is concluded. This should be done in justice to him as well as to the University. In his present situation he depends upon his geological course to feed his paleontological classes. When here a year or so ago he indicated something of the success of his paleontological classes, and so I was prompted to inquire what percentage of his paleontological students came to be interested in the subject from their course in zoology. He gave me a look of surprise and answered—"Why, none at all," and he proceeded to explain that in his course in general geology he brought the students into contact with the fossils and they thus became interested in them and were led on to paleontological studies. This accords with general experience. The great majority of students in paleontology come to their interest in the subject from geological studies and the larger number of American institutions associate paleontology with geology on this account, as shown by the following gathered from the last Handbook of Graduate Courses:
I.

It is possible that Columbia should be entered on the biological as well as geological side though no paleontological course is named under biology, since Professor Osborn has done paleontological work and probably gives some paleontology incidentally at least, while on the other hand perhaps Princeton should be classed also on the geological side, as Professor Scott of the geological department (author of geological text book) gives the paleontological course. So also at Yale, Marsh is known as a paleontologist and geologist, rather than as a paleontologist and zoologist. The practical associations of the paleontology both at Yale and at Princeton are predominantly geological.

I need not say that our own experience is of the same import. There is really no reasonable ground for expecting paleontology to flourish unless it is closely associated with

It is desirable that the Department be included on the site

It is desirable that the Department be included on the site

It is desirable that the Department be included on the site

It is desirable that the Department be included on the site

It is desirable that the Department be included on the site
geology. Now that there is opportunity for adjustment it will be a grave mistake not to put the paleontology in the relations most conducive to its success.

Very truly yours,

[Signature]
Secrecy. Now that there is opportunity for employment, it will be

have mistaken not to put the recommendation in the reference book.

Very much respect,

[Signature]
Dr. W. R. Harper,
Dear Sir:-

Enclosed you will find the letter you asked me to write to you concerning the place in the University. I had a talk with both Dr. Chamberlin and Dr. Whitman and got their ideas of the courses that might be advantageously given for each department. I shall be glad to outline this work for you and also to give you an idea of the methods and aims of the departments of Vertebrate Paleontology as carried out in other Institutions if the occasion should demand.

Very Respectfully

O C Case
Milwaukee, Wis.
Nov. 29, 38

Dr. W.R. Herber,

Dear Sir:

I hope you will find this letter as I am to write to you concerning the place in the University I have a talk with both Dr. C. Chapman and Dr. Whitman and for their ideas of the course that might be sympathetic with the course of study. They have given you for each department in philosophy as an idea of the methods and aims of the departmental interests and hereupon in the occasion of the籀加 Phillies and in order to better understand the occasion.

Yours very respectfully

[Signature]
Dear Sir:

Replying to your request that I give you an idea of the needs of a department of Paleontology at the University and the conditions under which I would accept a position at the University in such a department, I would say:

First, the department should be maintained as a distinct department and not merged into another. This view is accepted I believe by the heads of the Departments of Zoology and Geology.

Second, provision should be made for the systematic collection of material and for the preservation of this in a form that would make it available to the students of the University and to others.

A department of such as proposed can not reach a great degree of efficiency until the collections have reached some size and are fairly representative of geological horizons as well as zoological types. The effort of the University should therefore be directed toward the gathering of collections and placing them on exhibition expecting the maximum of result from a scientific and pedagogical standpoint after this work is in some degree advanced. This has been the history of the development of the centers of paleontological work in this country. Not only should there be a fund for collecting material but there should be an amount available for the purchase of chance specimens that may be purchasable for only a limited time. I should suggest that a certain amount, not less than $500
I am pleased to have the opportunity to address you on the subject of the needs of the Department of Psychology at the University of Wisconsin.

I am writing to express my interest in the position of a psychologist at the University of Wisconsin. I believe that the Department of Psychology is an excellent place for my professional development and growth.

I have a strong background in psychology, having completed my undergraduate degree at the University of California. I have since conducted research in various areas of psychology, including cognitive and social psychology.

I am particularly interested in the role of emotion in cognitive processes, and I believe that the University of Wisconsin is well-suited to further my research in this area. I am confident that I can make a valuable contribution to the Department of Psychology and help to advance the field of psychology.

I am available for an interview at your convenience, and I look forward to hearing from you.

Sincerely,

[Your Name]
per year for a term of years be placed at the disposal of the
director of the department who shall have discretion as to the sp
spending of all or a part of the sum each year. This will enable
him to prepare one year, by economy, for subsequent years when more
expensive expeditions may be necessary. The nature of the regions
in which most of the Vertebrate fossil material is obtained, the rem
moter parts of the western plains, makes an expensive outfit often a
necessity.

The benefits of such a department are not confined closely
to the students of the collections, nor even to the students of
related sciences, they extend to the University in general because
of the great popular interest that attaches to the material. This
is amply attested by the success of the museums in the American
Museum of Natural History at New York, the museums of the Princeton
University, Yale University, and Kansas State University and
the care spent in their maintenance.

Third, I should require for my needs at least the salary of my
present position, $2,000 per year. This with $500 estimated as possi
ble sum for the collections for the first few years would exceed
the salary paid the former director of the department.

Very Respectfully,

[Signature]

State Normal School.
Dear Mr. Kent:

I am writing to express my interest in the position of accountant advertised in the New York Times. I have a degree in accounting from the University of California, and I believe my skills and experience make me a strong candidate for this position.

I have worked for several years in the accounting field, and I am confident in my ability to handle the responsibilities of the position. My previous experience includes working at a large accounting firm, where I developed strong skills in financial analysis and tax preparation.

I am available to begin employment at your earliest convenience. I would be happy to discuss my qualifications further and to arrange an interview at your convenience.

Thank you for considering my application.

Sincerely,

[Signature]

State University School
Apr. 26, '99

The University of Chicago.

Dear President Harper,

I am not quite clear as to what the plan is, with reference to Paleontology. This Dept. came here as a part of Biology, and after a time we listened to a claim on proposition to divide the Dept. giving half to Geology and half to Zoology. We met and discussed the whole subject for three days and a decision was reached, which left Paleontology undivided with the Biological department. I hoped the matter was settled forever, but in this I was mistaken. The effort to break up the Dept. taking half under the wing of Geology has continued persisting.
While I have no time to devote to squabbles with Geology, I feel very strongly that it would be to the organization of Paleontology and the part of Geologists in matters of aid and our for the best interest of Paleontology, I want merely to know where I stand, and what you propose to do with Paleontology. My interest in that dept. has not abated, but I have seen the whole business turned over to Geology, if I read correctly the letter known to me and the part taken by Geology in arrangements for Mr. Chase. I have seen several letters, beginning last summer, written to Mrs. Case, which have given me some idea of how the matter was developing. I hope you will see
That the circumstances justify any interest in this matter. I have not undertaken to quarrel with anyone in Geology over that decision you rendered at the time of our controversy several years ago. I have taken it as final, and I think that is the way it should have been taken by all.

Sincerely yours,

C. O. Whitman
My dear President Harper,

I fully expected to find time to see you, at least long enough to say goodbye, but I found at last moment that I had to sit up until mid-night to get my words together to leave this morning. I assume you regret not having had time with you about the Paleontology. I have a real and earnest interest in this matter, but I have felt that you had taken it on.
I am busy altogether and turned it over to Geology. I think this is that, would be a very serious mistake, and as it what is due us.

I hear that Mr. Salisbury claims that the question of a department is already settled against our mind. That Invertebrate Paleontology is already established in Geological Dept.

He seems further to think that he is to settle the vertebrate
Paleontology. I don't really know how much authority you give him in such matters, but I beg you not to sacrifice us all to one old friend, T. Geologist. We believe in attending to our own business, and we do not believe in being absorbed or dictated to by another dept. Will you not just this matter on a basis where we can have no further intrusion. I think you decided this matter
on evidence, and

as you lie, I want

the privilege of

presenting the question

over again.

With best wishes

and hopes to see

you at Ward's

Hall. I remain

Sincerely

C. O. Whitman
May 21st, 1902.

Professor S. W. Williston,
Lawrence, Kansas.

My dear Professor Williston:

I was very glad to get your letter of May 15th. I hope that the University documents have reached you. I can easily understand that the week has been very trying one for you. I am delighted to know that you are able to pass through this trial because of your faith in the future. You may be sure that we shall do all we can to enable you to realize your highest expectations.

Yours very truly,

W. R. Harper
May 9th, 1908

Professor W. H. Millington

Insurance Kansas

My dear Professor Millington:

I was very glad to see your letter of

May 7th. I hope that the interim etc. arrangements have reached you.

You mentioned your wish that the work we have been working on for you

can surely understand that the work we have done will satisfy one for whom

we are striving to know that you will like to keep through the first possession of

your faithful in the future. You may be sure that we will do all we can to

cooperate you to realize your highest expectations.

Yours very truly,

W. H. Harper
Lauren. May 10, 07

Dear Dr. Rutherford,

Your letter received. Thank

acknowledged. Request to send me copies of the Murray Reports and other matters relating to scientific departments. After I have studied these a few

weeks, and have become better acquainted with the

methods of the University - so different from my own - I

will send Professor Chamberlin and other men the

courses I desire to join for their suggestions, to be then

incorporated in this announcement.

I am looking forward with many hopes

and expectation that work at Chicago. If true, it is

a relief hence to the freed from so much that has

been a great burden in the past few years. But

true work has been a very trying one lately. It has

been hard to make the people here understand that

the decision is already made - and harder still to

earn my living, and my friends. Be not

afraid with my collection, and my friends. Be not

afraid, and your friends.

Very truly,

[Signature]
May 13th, 1902.

Professor S. W. Williston,
Lawrence, Kansas.

My dear Professor Williston:

I am happy to write you that at the meeting of the Board of Trustees held last Tuesday, you were elected Professor of Paleontology in the University of Chicago. It is understood that you will receive a salary of $2,000, and that you are also to have official connection with the Field Columbian Museum with an additional salary of $1,500 for such service. I assure you that we appreciate the meaning of your coming, and I hope that you will send in your courses at an early date to be announced for the Autumn Quarter.

Yours very truly,

W. R. Harper
May 13th, 1908.

Professor E. W. Miller:

Lawrence, Kansas.

My dear Professor Miller:

I am happy to write you that I attended the meeting of the Board of Trustees held last Tuesday, and your name was selected as Professor of Philosophy in the University of Chicago. It is understood that you will receive a salary of $5,000, and that you will be expected to have all collegiate connection with the Field Geological Museum, with an additional salary of $1,500. I am much surprised to receive the news of your coming, and I hope that you will carry it to your advantage. The impression of an early date to be announced for the Autumn Quarter.

Yours very truly,

W. R. Harper
July 14th, 1902.

Professor S. W. Williston,

Lawrence, Kansas.

My dear Professor Williston:—

I am writing to ask whether there is anything I can do to make your coming to us easier. Is there any help I can render in any way? If it is desirable, in connection with your moving expenses, to have an advance on your salary, we shall be glad to arrange it. We are quite anxious that you should come to us and settle down in the most comfortable way possible. We are counting on great things in connection with your future work. I am hoping that I may be of service to you in making suggestions concerning the educational work of your children.

Mrs. Harper will be very greatly pleased to meet Mrs. Williston as soon as possible after she reaches Chicago.

Yours very truly,

W. R. Harper
Professor E. W. Williston,

Lawrence, Kansas

My dear Professor Williston:

I am writing to ask another favor. I am sorry I cannot make your company to an extent. If there is anything I can do to make your visit more enjoyable, my wife and I would be pleased to hear from you.

I am writing to ask another favor. I am sorry I cannot make your company to an extent. If there is anything I can do to make your visit more enjoyable, my wife and I would be pleased to hear from you.

With best wishes,

W. F. Halsey
July 18th, 1902.

My dear Professor Williston:—

I am very much obliged to you for your letter of July fifteenth. I am glad to know that everything is prospering. I will keep in mind the matter of a house.

I am sorry to learn that Mrs. Williston’s mother is failing.

I agree with you that Professor Case ought to be allowed to do as much work as he desires.

Hoping that we shall see you very soon, I remain

Yours very truly,

W. R. Harper

Professor S. W. Williston,

Lawrence, Kansas.
July 26th, 1905.

My dear Professor Williford:

I am very much
appreciative of your kind letter of July 2nd.
I am eager to know that everything is progressing
I will keep in mind the matter of a house
I am sorry to learn that the Williford's motor
is failing.
I agree with you that Professor Cane ought to go
allowing for us much work as he sees fit.

Hoping that we shall see you very soon I remain

Yours very truly,

W. R. Hinde.

Professor C. W. Williford.

Lewes, Kansas.
July 15, 02

Dear President Harper: I thank you sincerely for your very kind offer of assistance, which I shall be glad to avail myself of later. I was in Chicago two weeks ago on my way to Pittsburg, but did not have the opportunity to see you or Prof. Chamberlin, as I had anticipated.

Mrs. Williston is still in New Haven with her mother, who is paralyzed and speechless, is failing slowly. She must remain with her while she lives, which may be for several weeks yet. For the past week I have been enjoying the luxury of doing nothing, I have promised to meet Chancellor Strong and the Board of Regents in a couple of weeks to advise them about the work that has been under my charge here, and to help them in the selection of my successor in the medical work.

I am anxiously trying to sell a or rent my house here before September 1st. In August, I am planning to make a short trip to Dakota, for the Field Columbian museum, and will visit Chicago on my way. It would be very glad indeed if you would put me in communication with some one who could advise me about a suitable house in Chicago. I would like very much a single house of eight or nine rooms, at a rental of from 50 to 60 (no more) with in reasonable distance of the colleges, museum, and public schools.
I was glad to learn from Professor Miller that my daughter can continue her work in the University there with but little interruption—conditioned only in Physics.

I am hoping that within a few weeks I shall have made some disposition of my property here and be ready to move, though in Mrs. Williston's enforced absence I am somewhat bewildered!;

Prof. Case writes me that he would be glad to have permission to work on the Permian fossils that he collected in Texas some years ago. I shall be glad to have him do so.) This field is now the most promising in all America Paleontology and I shall devote my own attention to it.

Meanwhile the American Museum and the Munich Museum are also interested in it— I should like to have as many discoveries originate from Chicago as is possible!

I am sending on some new material from a new locality for Mr. Case to compare.

With many thanks for your kindness

I am sincerely yours,
I was glad to learn from Professor Muller that my request was being considered. I am continuing my work in the University Press with part-time assistance, considering only in Physics. I am planning to spend a few weeks at the University and to make some contribution of my research work, and to return to the University in January, 1928.

I am enclosing the reference letters that were sent in with my application for appointment to the American Philosophical Society. I am grateful for the interest shown by the University of Kansas and the American Philosophical Society in my work.

Thank you very much for your kindness.

I amincerely yours,
Aug. 30th, 1902.

Professor S. W. Williston,
Lawrence, Kansas.

My dear Professor Williston:

We shall be very glad indeed to welcome you, and when you come to Chicago next Tuesday, if I can be of any service in helping you to find a place, I wish you would command me. I am sure I can introduce you to some men who can be of service. We are looking forward with great pleasure to meeting Mrs. Williston and the members of your family.

Yours very truly,

W. R. Harper
My dear Professor W. Willard,

We will be very glad to hear from you. I hope you will come to Chicago next Thursday, if I can be of any service in preparing you for your speech. I wish you much success.

We are looking forward with great pleasure to meeting you, Mr. Willard, and the members of your family.

Yours very truly,

Mr. Hilder
Dear President: I shall probably be in Chicago next Tuesday. Mrs. Williston returned from the South last week and we are in the midst of moving. I shall leave my family here until I have located a house and my goods here arrived. I shall leave my family here until I have located a house and my goods here arrived. I shall leave my family here until I have located a house and my goods here arrived. I shall leave my family here until I have located a house and my goods here arrived.

Sincerely,

J.W. Williston
Mr. S. W. Williston,

My dear Mr. Williston:

I shall be able to talk with you definitely in reference to the future within the next ten days. I am hoping to have an interview with you before long.

Yours very truly,

W. R. Harper
MILKHOUSE

1023

Mr. F. W. MILLER:

I am to go to work to talk with you and I believe in the reference to the future. I am making an arrangement with you before long.

Yours very truly,

W. H. Harper
Dear President Harper:

Will you pardon me for expressing my anxiety to learn whether anything further has been decided regarding my request? I have heard nothing further from

Mr. Ryerson. The sudden visitation of

my family is causing much distress—I say,

family and capacity to myself. We are doing

what we can with our summer material,

so that I am not idle.

The plan for the reorganization of the

Paleontological department which will be presented

to you by Prof. Chamberlain is one which I sincerely

hope may be carried through, if nothing else more

feasible presents itself. In this teaching especially

I believe that my work may be made much

more effective thereby,—in making paleontology

a more elementary and integral part of

first Geology and also Geology. It is very pleasant

to teach graduate students, etc. My class now

numbers seven,—but paleontology is geology and geology
The plan is in great measure not experimentally
with myself. I have tried it in past years
successfully. I shall be personally

glad to do anything whereby the new
departments in our University may be
strengthened rather than to help to build up
a department for effects only.

Very truly yours,

O. H. D. Thompson
My dear Mr. Williston:

Mr. Ryerson has called me up to tell me that Mr. Higinbotham is anxious to have a talk with you. Mr. Ryerson had informed me beforehand that he feels that you have not attacked Mr. Higinbotham vigorously enough. Will you not kindly have a talk with him within the next two or three days. Call him up on the telephone and he will give you an interview.

Yours very truly,

W. R. Harper
Mr. Herbe.

Mr. Herbe, please call me by 10 a.m. today.

We frequently have appointments with you at this time, and not the last couple of times we have had appointments. Could you please call me at 10 a.m. today?

Talk with him within the next two or three days. Call him up on the telephone and let him know you are in France.

Yours very truly,

Mr. Herbe
June 3, 1904.

Professor S. W. Williston:

My dear Mr. Williston:

Yours of May 30 with the letter of Martin has been received. I should be glad some time to talk the matter over with you. I am returning the letter and the photograph. It is certainly a most interesting case. I was not discouraged by the interview last week, and I hope you were not.

Very truly yours,

W. R. Harper
March 8, 1907

Professor S. W. Williston

My dear Mr. Williston:

You are of May 20 with the letter of May 20th have been received. I am going to try some time to write the letter over with you. I am returning the letter and the photographs. It is certainly most interesting case. I was not acquainted with the in-terview last week. may I hope you were not very sunny nerves.

Yours very truly,

W.R. Herbert
Dear President Harper:

I enclose you a letter recently received, with at least a hope that it will interest you, and that it may lead to something for the benefit of paleontology in this university. Mr. Martin, the writer, was my assistant for five years at the University of Kansas. I have no hesitation in saying that he is one of the best, most reliable, and most expert of living collectors and preparators of vertebrate fossils. Discouraged at the outlook for paleontology at the University of Kansas after my withdrawal from that institution, he obtained leave of absence to make an expedition to South America, where I had long hoped to send him. The expedition was widely advertised at the time as from and by the University of Kansas, but it was made wholly upon Mr. Martin's resources. I have no misgivings as to the results of his expedition. He of his own volition promised me that I should have the first opportunity to acquire the results of his expedition in their entirety, and at a reasonable cost—He desires only to be reimbursed for the cost of his trip and receive a reasonable wage for his services. The opportunity is an excellent one—one that can not be expected to occur again, unless an expedition is sent to Patagonia for that express purpose. The fossils which he has collected are of the deepest scientific interest, and are wholly unlike anything
Dear Professor Brown,

I am writing to express my concern regarding the recent outburst of violence and unrest in the area. The situation has escalated to a point where I fear for the safety of my colleagues and the students. I have been informed of the efforts being made by the authorities to resolve the situation, but I am worried about the potential for further violence.

I understand the importance of maintaining order and safety, but I am also concerned about the long-term consequences of this kind of disruption. It is crucial that we find a solution that addresses the underlying issues and prevents such incidents from happening in the future.

I am available to discuss this matter further and to offer any assistance that I can. Please feel free to contact me at your earliest convenience.

Sincerely,

[Your Name]
obtainable from our own country. South America, you may perhaps know, has a distinctive paleontological fauna, with numerous orders and groups of animals unknown elsewhere in the world. This material, could we acquire it, would furnish, not only excellent, most excellent material for research, but many forms also of the deepest interest to every student of zoology.

Not only am I hoping that this collection, which upon the whole may cost four or five thousand dollars--that is mean the results of his entire expedition for the next year, as well as what he has already obtained, which may be worth about a thousand dollars--may be obtained for our university, but that I may be able to secure Mr. Martin as my assistant when he returns to the United States. He would be satisfied with a salary of one thousand dollars for the present, and will be contented indefinitely with the sum paid to the chief preparator at the American Museum--fifteen hundred dollars.

From the result of the recent conference I am well satisfied that, if Chicago is ever to become a center for paleontology in its wide aspects, it must be due to the efforts of the University of Chicago. I do not believe that the Field Columbian will ever desire to rival our collections; they cannot, indeed, and it would be unfortunate if paleontology should be divided between two institutions here at Chicago. The authorities of the Columbian museum do not seem to appreciate the fact, for fact it is, that paleontology is becoming the chief interest in nearly all the great museums of the world--its absence in the Columbian museum will one day be greatly regretted.

Last year I heard through a friend, the late Professor Knight of the Univ. of Wyoming, of a new field for vertebrate fossils, in an unexplored region 150 miles north of the Union Pacific railroad in Wyoming. I shall be in it with my party in about two weeks, and we are confident of securing results of most deep importance scientifically. But such opportunities are rapidly becoming few--they will all be gone in ten years, for already are there few unexplored regions. I am earnestly anxious that such opportunities as remain may be taken full advantage of.

Very truly yours,

S. W. Williston
Dear President Harper:

There seems to be no demand for my lectures. I spent about six weeks making preparation for them, partly at my own expense, but there have been no requests for my course or courses yet, I believe. I postponed my classes this quarter, much to my regret, as they would have been much larger than last year.

I am getting discouraged and despondent. My family is at the old home in New Haven, and must remain there until conditions change. I cannot place the burden upon Mrs. Williston that she had last year. I have, as it is, contracted a debt of about eight hundred dollars since coming to Chicago, and shall have to mortgage what little property I own, I suppose. I have been engaged the past few weeks in trying to prepare some of the remarkable new discoveries of the past summer for publication, but the work, without assistance, is very slow.

Kindly tell me whether you see any immediate outlook for the better.

Very truly yours,

S. W. Williston

Dear Sir:

H. F. Johnson
May 15, 18.

Dear President Jordan: I feel that I was not violating the confidence requested in the enclosed letter, by sending it to you, since without your approval, I should not entrust myself from my duties at Chicago for the few days necessary. I can arrange with Prof. Meier or with my lecture classes to meet my classes on 12-14 or 15. and Mr. Meier can keep his student quite conveniently employed until 15-19. when I shall be there.

I wish you will be not disappointed if I can not be present to receive the degree. Perhaps there is some other person in whose favor these different doctors degrees!

I received your second letter a few days ago at Berlin, and I have been troubled ever since. The matter it seems to me was meant to justify my friends

Presentation to Mr. Williford.

221 Annex St.

New Haven, Connecticut.
President H. P. Judson,
The University of Chicago.

My dear President Judson:

Some of the vertebrate paleontologists outside the University have raised the question of a memorial volume to Professor Williston. It is represented that some of his students and other vertebrate paleontologists as well, would be glad to make contributions to such a volume. The difficulty is, of course, the expense.

It would be very gratifying to the Department here to have such a volume issued. There is, of course, no way of estimating its cost until the contributions are in. Have you any suggestions as to the ways of financing such an undertaking? I am afraid that few of his pupils are in a position to do much financially. The suggestion from outside was that the founders of Walker Museum be asked to finance the volume, but, if I understand the situation, there are none of Mr. Walker's descendants who would be interested. I am not aware that Mr. Williston had special friends among people of large means, and the family is not in a position to help.

Very truly yours,

R.D. Salisbury
May 11, 1912

Dear Mr. Judson,

I am writing to inform you of a matter that has arisen in connection with the Department of Geology. It seems that there is a need for an additional assistant professor to join the faculty. This is due to the current faculty's workload and the increasing demand for teaching and research.

I believe you will be interested in this position as I understand you have a background in geology and experience in teaching. I am quite certain that the University of Chicago will be interested in your expertise and would benefit from your presence.

Please let me know if you would be interested in this opportunity. Thank you for your time and consideration.

Sincerely,

[Signature]
Chicago, March 19, 1919

Dear Mr. Salisbury:

Your note of the 11th of March with regard to the memorial volume to Professor Williston is received. I hardly know what to suggest. There are none of the founders of Walker Museum available, and I doubt whether former students would contribute enough to make it possible. I could not recommend the matter to the Board of Trustees at the present time.

Very truly yours,

H.P.J. - L.

Dean R. M. Salisbury
The University of Chicago
Dear Mr. Assistant:

Your note of the 14th of May with

regard to the request previously made to associate Willett

has been received. I very much know what to expect.

The name of the trouble as well as the motive are well

understood. Whatever trouble you may experience may

form an excuse for the matter.

For the reason of the presence of the present time,

very truly yours,
