[additional text not clearly legible]
101 EAST ERIE STREET
CHICAGO

15 May 1918.

Mr. Harry Pratt Judson,

President of The University of Chicago,

Chicago, Illinois.

Dear Mr. Judson:

Your letter of September has not had an answer from us because our committee did not take up the active consideration of the matter until this year.

We are confronted with difficulties, which have come to seem insurmountable, in making immediate progress in our wish to see the idea that the Memorial Committee desires to put on foot established in the University of Chicago Medical School.

One of these is the fact that the medical school is still in formation; and another that it has not as yet a medical head of the medical school with whom we can confer—such head being of necessity
a factor in a proposition vitally concerning the medical school;

another is the fact that our plan cannot wait indefinitely for the
natural course of the events of the medical school, since it con-
cerns friends of Dr. Favill who may wish to take part in this
memorial and who therefore should have the opportunity opened to
them; still another is the difficulty that we feel in planting
our work in the medical school on the basis of a general understand-
ing concerning it, because it would be difficult to define and yet
without definition, which would maintain it as an entity, it would
be open to the possibility of being lost in the manifold interests
of the University.

It is therefore that we are not availing ourselves of
the permission of the trustees of the University of Chicago to
a factor in the proportioning activity concerning the Federal Building.

A recent in the field that one plans cannot make the most of.

Some attention of the Honorable Secretary since its appearance.

Some attention of the Honorable Secretary since its appearance.

Some attention of the Honorable Secretary since its appearance.

ask to meet a committee of the trustees to take up the many questions which would come at once to discuss.

Our solution is to recommend proceeding to immediate definite action to establish this memorial by appointing trustees to receive the fund and laying upon them the responsibility of carrying out the ideas the committee has adopted.

The plan will thus at once be begun and will be in charge of trustees committed to its furtherance.

The carrying out of the idea and the work in a medical school will be a part of the hope of the committee and of the trustees, from whom you will hear in regard to it in due course. The right moment and the right plan, for this part, the trustees can await.

Your own attitude about the idea, at all times, and the appreciative attitude of the trustees of the University of Chicago, conveyed
to us by you, lead us to feel that you and they will agree with us
in the plan of action which we have felt offers the surest road for
the unhurried development of the idea the committee has adopted.

I am,

Yours very sincerely,

For the Sub-Committee of the

Henry Baird Favill Memorial Committee.

P. S. In sending this letter I ought to say that the
committee did not feel willing to send it until the question
had been submitted to the whole committee. This has been
done and our recommendation has been adopted by the committee.
Chicago, September 15, 1917

Dear Mrs. Blaine:

At a meeting of the Board of Trustees held on the eleventh of September the communication from the Committee on the Faviill Memorial was presented, and the following action was taken in relation to it:

The Board of Trustees of the University of Chicago expresses to the Committee organized to inaugurate the Memorial to Dr. Henry Baird Faviill its cordial appreciation of the general scope and plan of the proposed Memorial;
Office of September 15, 191A

Dear Mr. Phelan:

At a meeting of the Board of Trustees held on the evening of September 15, the communication from the Committee on the Peabody Memorial was presented and the following action was taken in relation to it:

The Board of Trustees of the University of Chicago expressed to the Committee organized to investigate the Memorial to Dr. Henry Peabody the high appreciation of the General Scope and Plan of the proposed Memorial.
The Board also informs the Committee that it would be glad to cooperate in the objects in view as set forth in the communication of the Committee dated August 22, 1917, and, upon request, the Board will appoint a special Committee to confer with the Committee on the Favill Memorial.

The above action I think covers the ground. I may say that the Board were highly gratified with the communication of the Committee, in thorough sympathy with its policies and purposes, and look forward with great interest to the success of the objects in view. I think that every Trustee realized the splendid vision involved in the Committee plans. With sincere regards, I am,

Very truly yours,

H.F.J. - L.

Mrs. Emmons Blaine
101 E. Erie St., Chicago
I am writing to inform the Committee that it would be a good idea to cooperate in the appointment of a new chairman for the Committee. The current chairman, Mr. Smith, has expressed a desire to resign.

The Board will appoint a special committee to coordinate with the Committee on this matter.

Yours truly,

Sept. 14, 1917.

President H. P. Judson
University of Chicago.

Dear President Judson:

The action with reference to the communication presented by the Committee on the Favill Memorial was recorded as follows:

It was moved and seconded that the Board of Trustees expresses to the committee organized to inaugurate a memorial to Dr. Henry Baird Favill its cordial appreciation of the general scope and plan of the proposed memorial; it, also, informs the committee that it would be glad to cooperate in the objects in view as set forth in the communication of the committee dated August 22, 1917, and, upon request, the Board is disposed to appoint a special committee to confer with the committee on the Favill Memorial, and, a vote having been taken, the motion was declared adopted.

This record was submitted to Judge Baldwin who offered the motion and was approved by him.

I have left the communication of the committee with Mr. Plimpton in case you desire to refer to it.

Yours very truly,

[Signature]

JSD: RT

Secretary.
Chicago, Illinois.
22 August 1917.

Mr. Harry Pratt Judson,
President of The University of Chicago.

Dear Mr. Judson:

We are delegated, by the committee organized to inaugurate a Memorial to Dr. Henry Baird Favill, to enter into conference and negotiation with The University of Chicago to determine if satisfactory arrangements can be made to fulfill the wish of the committee to institute a work in Preventive Medicine and Hygiene—a work that may most fitly find a place as a department in a great forward-looking medical school such as is contemplated by The University of Chicago.

Our first step is to come to you to ask all that you can give us of what would be the attitude of the
Dear Mr. Jackson:

We are grateful for your committee and organization to inaugurate a Memorial to Dr. Henry B. Earle to enter into conference and negotiation with the University of Chicago to determine if educational arrangements can be made to fill the place of the committee to inaugurate a work in Preventive Medicine and Hygiene—a work that may meet today's need as a supplement to the present-day medical schools under the auspices of the University of Chicago.

Our first step in coming to you is to ask if you can give us an idea of what would be the attitude of the
University of Chicago Medical School on the fundamental idea in our plan and to ask for information about the Medical School.

We are putting these inquiries in writing that we may more surely convey them clearly to you and give the whole committee the full sense of the inquiries we have made.

First, to outline our plan:-

The work we have in view would be a new departure for a medical school.

It is, in a word, to bring the subject of health into the medical school and the medical school into a relation to the community perhaps not heretofore attempted; by founding a Department of Preventive Medicine and Hygiene which shall pursue its work in conjunction with the community.

Our plan is, in fact, to seek to bring the subject of health into the realm of exact science; creating standards of
UNIVERSITY OF OREGON MEDICAL SCHOOL on the fundamental these
in our plan and so seek for information about the Medical School.
We are putting these instructors in writing that we may
more earnestly consider them especially to pen and give the public co:n-

while the full sense of the instructors we have made.

Preliminary outline of the plan:

I. the work we have in view would be a new departure for
a Medical School.

II. To bring the subject of pediatrics into
the Medical School and the medical school into a relation to the
community perhaps not heretofore attempted; by having a depart-
ment of Preventive Medicine and Hygiene which shall pursue the
work in connection with the community.

Our plan is to first, to seek to bring the subject of
pediatrics into the realm of exact science; clearing standards of

method and result and working out plans for reaching the highest attainable level of individual and community health.

It is, to bring the consideration of health into the minds of people as an individual standard and as a fundamental community need - by educating the community and educating teachers of the community in this subject.

Its aim would be to bring about the achievement of health, as far as possible, for humanity.

The emphasis of work in medical schools, as yet, is upon disease - its discovery and cure - and, to a lesser degree, on its prevention.

Our idea lays the emphasis on the fundamental prevention of disease by the upbuilding of health.

We want the work to achieve the teaching of this point of
method and results any working our plans for resuming the fight.

get assistance from local public health and community health.

It is to place the consideration of health into the hands of people as an initiating agency and as a fundamental community need—by educating the community and educating teachers.

are at the community in this subject.

It is worthwhile to print short the statement of

posts as far as possible for humanity.

The importance of work in medical schools as yet in

when illness in a discovery any time. and for a longer pe-

are on the prevention.

Our ideas have the emphasis on the fundamental the

avowed of illness in the preparation of health.

We want the work to improve the teaching at this point of
view to the undergraduate medical student. For this pur-
pose the department should have the direction of the under-
graduate teaching in this subject. And we want to have
graduates, who may wish to specialize, trained in this depart-
ment.

We would wish to have fellowships for graduate
teaching.

We propose that research shall be carried on - an
essential in developing the science of health.

It is an integral part of our idea that the work
of the department should be applied in a community for the
sake of the education of the student; for the sake of the
demonstration; and for the sake of the actual human results.

We think also efforts would necessarily follow to
arouse the minds of people in every possible way.

We think the department would become an authority
on public health questions for the community.
We would wish to have Fellowships for Graduate Research.

Teaching.

We propose that teaching staff be carried on.

It is an integral part of our aims that the work of the department should be applied in a community for the sake of the student; for the sake of the generation, and for the sake of the current human interest.

We think these efforts would necessarily follow to enhance the minds of people in each possibility we see.

We think the department would become an authority on public health discipline for the community.
An outline follows of the range of topics and scope of activities we have been led to consider in studying into the possibilities of this plan:

Race improvement:

- Eugenics,

Study and improvement of all the conditions relating to birth and infancy.

Infancy:

- Study and prevention of infant mortality,
- Infant upbuilding.

Childhood:

- Its care, its diseases and its special interests.

Adolescence:

- Its especial interests.

Hygienic conditions of living - individual and community:

- Housing,
- Air - outdoor and indoor,
- Food and drink,
- Exercise,
- Clothing,
- Activity and rest,
- Occupations and occupational diseases,
- Recreation.
in this community, and those for which the best people could
be found.

Mental hygiene.

Immunology.

We think it is not too much to say that this work,

The activities of such a department should include:-
in an advanced medical school, would aim toward the regenera-

Application of the work in the community through agencies:-

Public health service of state and city,

Philanthropic agencies,

Schools,

Medical practitioners,

Agencies created by the department.

Propaganda:-

Public lectures,

Printing,

Ocular demonstration.

It is our thought that, in this vast field, the depart-
ment would begin by choosing some especial parts for immediate
work - no doubt adopting those that relate to a particular need
govern it.

Therefore, our question as to the attitude of the
The activities of such a department might include:

- Research
- Teaching
- Undergraduate
- Graduate
- Application of the work in the community through training
- Public health service at state and city levels
- Philanthropic service
- Social work
- Medical practice
- Health education of the department

- Responsibilities:
- Public features
- Private
- Community demonstration

It is our intention that in some cases the part-time work

may need to be performed by personnel some especially trained for immediate needs.
in this community, and those for which the best people could be found.

We think it is not too much to say that this work, in an advanced medical school, would aim toward the regeneration of the race - leading directly to the more intelligent, disciplined adjustment of forces by each individual and also to the demand, for the whole, of the conditions which each individual needs.

We feel that such a work, in such a school, could lead the way toward the conservation of the human family, which, we think, the world is in crying need of and is waiting for. And we feel that in leading the way toward that end the widest human co-operation would appear with its greater values.

To inaugurate the work outlined the essential ideas on which it is based should be desired by the authorities who govern it.

Therefore, our question as to the attitude of the
In this community and those for whom the poor people care.

We think if you too much for any part of the work.

To understand the work outlying the scanty these

on which it is based would be gotten by the authoritative with

board if.

Therefore our decision as to the influence of the
authorities of The University of Chicago Medical School on the purposes, ideas and plans we have outlined is a crucial one and lies below all of our considerations together on this subject. And a further question growing out of that, it would perhaps be clearer to consider with it, namely:-

Do you think such a new idea would be best started in a new medical school or outside of it with sympathetic relation to it?

The ways of safeguarding the original purpose, in the operation of the plan, are questions that would come next and we do not doubt that ways can be found, without interfering with the internal management of the work, to lodge in trustees of the fund a responsibility that will enable them to be assured, for all time, that the purposes of the work are being followed or else, with due notice, to withdraw the fund for the pursuance of its aim in other ways. But we are not meaning to
introduce any details' questions at this moment.

Primarily, we need to ask whether the idea, in all its bearings, would be desired by the authorities of the Medical School of The University of Chicago. And we want to say how immeasurably we have thought The University of Chicago would add to the possibilities of the work.

We are coming to ask these questions before any effort is made to reduce the plan to a certainty in respect to funds to carry on the work. Our moves in that direction would be somewhat different, according to the outlook for the work as we have thought of it in a medical school.

But, in that connection, we ought to ask you to give us light on this:

The work we are planning and outlining will, no doubt, be much greater in its inevitable growth, in scope and size, than the part which the committee is meaning now to inaugurate. The committee is contemplating, as an im-
Introduction any special discussion at this moment.

Primarily, we need to ask whether the idea of the

We cannot look at the University of Chicago. And we want

to say how immensely we have benefited the University of

Chicago might add to the possibilities of the work.

We are coming to feel these possibilities. People are

likely to make to reduce the plan to a certainty in respect

mediate step, only the start of this work. We ought to know whether The University of Chicago Medical School would be interested to make essential plans for the arrangements for such a work, related to its possibility but without relation to a sum of money in hand, or whether The University of Chicago Medical School could only consider arrangements in relation to sums in hand to offer.

We perhaps should not fail to mention, in this letter, the fact that in our deliberations we have had in mind that if the arrangement should become a mutual one the University might be expected to furnish space for the work, leaving the entire income of the fund to be devoted to the work itself.

For our information we want to ask:

Who are the final authorities in matters pertaining to the new medical school?

What are the terms of the control of its

27 November, 1916.

We - your subcommittee - have given careful
and thorough study to the subject committed to us -
recommendation of the form of the memorial to be plann-
ed by this committee for Dr. Henry B. Favill.

We were requested to consider all suggestions
made at the time of the last meeting of this Committee,
and all others that might be brought or might occur to us,
and to deem ourselves under no limitation in making our
search in St. John's Hospital especially devoted to the
recommendation.

We have followed that course. We have studied
the suggestions that were before the committee; we have
received other suggestions; and we have considered this
subject from our own understandings of it; and we are
but now ready to make a recommendation.

The suggestions presented at the last meeting
of this committee were:
On November 12th.

We have acknowledged your letter dated November 10th,

and understand that the matter so referred to in

our communication of the latter date to the Secretary to the Peace

is in the committee for Dr. Henry F. Pratt.

We were requested to consider the amendment

made at the head of the last meeting of the Committee.

and if possible, that which I propose at that time, to be

sent to your office and your report on the Appendix to the

recommendation.

To take notice of the Committee.

The Committee referred your reports to the Committee on Finance.

and it appears that the Committee have concurred.

The report from the Committee of the Joint Committee.

and that of the Joint Committee on Finance.

but can look to make a recommendation.

On which occasion the joint meeting of the Joint Committee.
A laboratory that would in some way become identified with the milk supply for the children of this country; that would at the same time insure a clean healthful supply of milk and protect the dairy industry from those who would willfully and maliciously destroy it. Suggested by Mr. Skinner.

A memorial laboratory for diagnosis and research in St. Luke's Hospital especially devoted to the study of problems relating to the practice of internal medicine. One floor of the new building of the hospital would be devoted to this laboratory. The general scheme of the laboratory is to group every known facility of recognized merit for diagnosis of diseases with ample provision for study and research and the teaching of students. The hospital would obligate itself
to maintain the laboratory and operate it. In order to care for the research and educational features it would be necessary to provide an income of five thousand dollars per annum to establish five fellowships. One hundred and fifty thousand dollars would be required for the cost of the building and equipment. The laboratory would be a long step in advance of anything that is done in any hospital at present. The laboratory would not lose its identity by reason of its connection with St. Luke's Hospital and would publish its results under the name of the Henry B. Favill Memorial Laboratory. The Suggested by Dr. Clark and Mr. Curtis, it would be established as to make possible teaching and research, which would be the basis of the work at the medical school. It would require from three-quarters to a million dollarsA Hospital to be built, to be operated by the

The association is now in the possession of the Government of India.
Chicago Policlinic to aid their efforts in building up a strong post-graduate school in Chicago. Suggested by Dr. Hooper, Dr. Chew, Dr. Edwin Ryerson and Dr. Harris.

The endowment of a medical department in the University of Chicago. This could be done with from one-quarter to one-half a million dollars and should be a permanent endowment. Suggested by Dr. Billings.

A hospital on the Midway, wholly controlled by the University for its medical purposes. The Hospital would need two hundred beds and would be so established as to make possible teaching and research, which would be the basis of the work of the medical school. It would require from three-quarters to a million dollars
and would be better carried out with two million dollars. Suggested by President Judson.

A fund to be used in the Presbyterian Hospital for the study of the principles of the prevention of disease and the study of diseases of unknown cause, with the maintenance of free beds. The work to combine investigation, research, teaching. Suggested by Mr. Albert Day.

A foundation for medical propaganda in public health, hygiene, and preventive medicine, probably to be established in the University of Chicago. Suggested by Mr. Pond.

COLUMBUS HOSPITAL. A building to be an asset to the present hospital, on land already owned and adja-
There were, besides these definite suggestions, general suggestions of territories appropriate for a memorial for Dr. Favill:

- Health or Preventive Medicine.
- Public health and instruction.
- Social and civic fields of work.

The thought was also suggested that the memorial for Dr. Favill might be a coordinating opportunity or influence in the medical profession, if it could in some way bring together and distribute widely the medical light of Chicago.

An Institute for Public Health and Sanitary Science. Subsequent to that meeting we received suggestions as follows:

- Columbus Hospital. A building to be an annex to the present hospital, on land already owned and adja-
sent to it, to be known as the Dr. Favill Memorial Hospital. The maintenance would be undertaken by the Order on the same basis as the Columbus Hospital is maintained. To be operated for charitable purposes and not for pecuniary profit. Suggested by Mr. J. W. Barney.

An Institute — building, equipment and endowment — for the prevention, control, and treatment of all social diseases. Suggested by Miss Addams and Mrs. Bowen.

An Institute for Public Health and Sanitary Science, to combine teaching, active research, and experiments in housing, industry, and recreation.

Suggested by Miss Addams and Mrs. Bowen.
The President wants to make the President of the Order as the new person at the Committee meeting.

To understand. To do anything for yourselves. Expected in
house and not look revolutionary纪律.

In million - surprising. Seventeen any school.

Note: for the consideration, especially any statement of the
society tomorrow. According to the name and now.

To investigate for poetry with any category.

Not sure, to complete something, but no category, and so on.

Paragraph to complete, necessarily. My inclusion.

In accordance with what happens and the present.
A Central School of Nursing and Public Health, to afford larger educational opportunities to women wishing to devote themselves to some one of the many forms of social betterment and community service to which nurses are constantly being called; combining theoretical instruction with practical service; requiring endowment funds to secure expert instructors and possibly scholarships for graduate students.

Suggested by Mrs. Ira Couch Wood.

With this wealth of suggestion and thought before us, and with our own minds looking only for the avenue which would continue and perpetuate, so far as possible, Dr. Favill's life work and influence we set our own to find what form of memorial would best fill this wish.
a laboratory. We first made the decision that we would not choose any object which was composed of material—anything that was built of bricks and mortar which could crumble away—but would recommend a foundation whose income could be used, as long as human affairs would stand or man could foresee, to carry out the object we desire.

This process of elimination narrowed our search at once and the question became, What work should we recommend for such a foundation to carry forward?

Our next thought was of the laboratory suggested by St. Luke's Hospital. The original suggestion as submitted had divided the suggested gift between equipment and some permanent fund. But the authorities of St. Luke's offered to change this suggestion and allow all of our fund to be a permanent endowment if we should consider that
We agree that the position that is nearly not open for an officer which we consider to be important.

This note may help to determine a compromise sense to

some extent. It may lead to an increase of the share of revenue.

In the opinion of the Minister concerned, the stock market

seems to be very the situation demands. And, one might

be a reasonable to open a consultation to which important.

We seem to worry about the situation and allow it in our
a laboratory plan was the one to be selected. This
gave us a free field to consider the desirability of
laboratory work as the work which should be carried on
in Dr. Favill’s memory.

The peculiar tie between Dr. Favill in his
medical work and this hospital, and the corresponding
affection that entered into the suggestion, made the
thought of this particular form of memorial especially
appealing, and drew our minds toward it with a strong
bond. But when we considered the suggested idea in-
trinsically, we concluded that the work of a laboratory
was not the work which would most completely express the
essential elements of Dr. Favill’s life work however per-
fect the equipment and arrangements might be. However
essential we thought he would feel such perfection of
laboratory possibilities to be to all medical work; is however we felt he would value its scientific contribution as a necessary tool, we concluded that that would be for his especial work in life but the starting point, the basis on which all scientific conclusions must rest, but for him, the platform from which to proceed towards his work for human beings. We found ourselves in need of a living, growing, creative work, to save and remake humanity, to achieve any real expression of Dr. Favill's life. Our continued deliberations we have come to 11. We found this preeminently in the subject of Preventive Medicine. every and education and dissemination of knowledge. We feel that Dr. Favill's unique contribution was in this field - that he was a pioneer in it and that he wanted to stem the tide of human ills by reaching them
-
at their source. For this he battled during all his years, gaining, now more now less, hearing and response from profession and laity. His life was spent in trying to educate the understanding of all people and trying to educate the teaching possibilities of all physicians to get the best of disease by getting ahead of it.

In that course he saw, most profoundly, the achievements and progress of enlightenment and of mental and moral discipline.

Through our continued deliberations we have come to feel that nothing will so well express his work as a continuing discovery and education and dissemination of knowledge in the field of Preventive Medicine - with the infinite possibilities of service contained therein.

We therefore recommend to this committee a
of spirit camera. It's fine for painting, but it's

jeans, including our new, large, pocket, and something

like a new coat to its

you expectation and faith. We like any where in the

accomplishment.

improve our continuing contribution to your
Foundation in Preventive Medicine to bear the name of Henry Baird Favill — and in doing so we are the more moved towards it because it would be the first of its kind and thus still more exemplify the man — so able to break into the unploughed territory.

We were not able to make our recommendation to the committee as soon as this idea seemed to us the paramount one. Such a foundation, unless it could be prepared to be an institution standing alone, must be a part of a teaching institution. The University of Chicago had made known to us its hopes for the foundation of a new medical school, but these hopes were not sure enough to be made the basis of a plan; nor were we enabled to speak definitely about them until their determination and recent publication. We then reviewed our conclusions and conferred with President Judson.
our conclusions and conferred with President Judson.

His statement of the purposes of the projected medical
school left nothing to be desired in its quality, the
aims being to have the training of the highest type
that exists and to have the dominant note one of service
through the medical profession.

We asked President Judson if, within the plan,
it would be possible for us to place a gift in memory of
Dr. Favill, determining its use, for a Chair or Depart-
ment of Preventive Medicine, and having it held in the
hands of its own trustees to insure its continued life
as an entity. These questions were answered in the
affirmative.

We have therefore concluded that this institu-
tion would be a right background for the memorial we
recommend - A Chair or Department of Preventive Medicine.
While no one work will express the whole of Dr. Favill's life contribution to humanity, we feel that work in preventive medicine will strike the keynote of his medical vision, and insured of continuance and growth, with its ever widening influence and its increasing entrance into the life and thought of people, we feel that it will more and more express his purpose in life - direct service to help, to instruct, to improve, and to cheer human beings.
