Descriptive Summary

Identifier	ICU.SPCL.POLANYI
Title	Polanyi, Michael. Papers
Date	1900-1975
Size	30 linear feet (60 boxes)
Repository	Special Collections Research Center University of Chicago Library 1100 East 57th Street Chicago, Illinois 60637 U.S.A.

Abstract Michael Polanyi, chemist and philosopher, was born, Budapest, Hungary, 1891. He received his M.D. (1913) and Ph.D (1917) from the University of Budapest. He worked at Kaiser Wilhelm Institute of Fibre Chemistry, Berlin, 1920 to 1923, and the Institute of Physical and Electro-Chemistry, Berlin, 1923 to 1933. He was chair of physical chemistry, 1933 to 1948, and professor of social studies, 1948-58, at the University of Manchester. Polanyi was senior research fellow, Merton College, Oxford, from 1958 to 1976. Died, 1976. The papers of Michael Polanyi contains personal and professional correspondence; research notes; manuscripts of lectures, published and unpublished works, speeches, German scientific writings, patents, and poetry; diaries and notebooks; offprints; and memorabilia, including photographs, clippings, a sound recording of an interview with Polanyi, Christmas cards, and invitations. Also includes photocopies of title pages of the 1,500 books from Polanyi's library. Correspondents include Joseph Oldham, Marjorie Grene, Harry Prosch, Arthur Koestler, Karl Mannheim, Edward Shils, and Eugene Wigner. Manuscripts and correspondence reveal the range of Polanyi's philosophical thought and interests in intellectual liberty and the issue of planning in science. Correspondence also illustrates Polanyi's participation in the organization of the Congress for Cultural Freedom and the Committee on Science and Freedom.

Biographical Note

Michael Polanyi was born in Budapest in 1891, and though his career as a scientist and philosopher led him far from his native Hungary, the intellectual milieu of his childhood remained a life-long influence on his work. His father was an engineer and businessman and his Russian mother, Cecile, wrote a fashion column for the German-language newspaper in Budapest. Throughout the early years of Polanyi's childhood, the family was financially successful, but most of their resources were lost before the first World War, leaving the children largely dependent on Polanyi's brother Karl for support. Despite this poor financial situation, Cecile Polanyi maintained a salon for Hungarian literary figures.

Polanyi grew up in a literate, political world. With his brother Karl and friend Oscar Jászi, a young Polanyi helped to found the Galilei Circle, a Hungarian nationalist group which promoted Hungarian cultural traditions and worked for an independent Hungarian state. Polanyi became a Doctor of Medicine at Budapest University in 1913 and served as a medical officer in the Austro-Hungarian army during World War I. His earliest scientific paper, "Chemistry of Hydrocephalic Liquid," was published at age 19. Throughout the war, he worked on the application of quantum theory to the third law of thermodynamics and on the thermodynamics of adsorption. In 1916, he published his work on adsorption, one of the first of over two hundred scientific papers he was to publish before his move into philosophy in 1948. His theory of adsorption was accepted by the chemistry faculty of Budapest University which awarded him a Ph.D. in 1917.

Following the war, in the autumn of 1920, Polanyi received an appointment to the new Institute of Fibre Chemistry in Berlin, part of the Kaiser Wilhelm Institute. His early years in Berlin are recounted in the 1962 essay, *My Time with X-Rays and Crystals*. Fritz Haber, the Director of the prestigious Institute of Physical Chemistry, sent Polanyi off to expand his laboratory skills in order to achieve full acceptance by the German scientific community. He succeeded in this with a study of x-ray diffraction of cellulose fibers, and in 1923 he was appointed to the Institute of Physical Chemistry to work under Haber. During the following ten years in Berlin, Polanyi established himself as one of Germany's leading physical chemists. He worked with some of the most prominent scientists of the age, including Eugene Wigner with whom he was to share a life-long friendship.

For Polanyi, who was a Jew, the coming to power of Hitler and the National Socialist Party marked the end of his career in Germany. In 1933, prompted by repeated attacks on Jewish intellectuals, Polanyi accepted a chair in physical chemistry created for him at the University of Manchester. He continued with the chemical studies begun in Berlin, and his laboratory at Manchester attracted students and established scientists from all over the world. His contacts with non-refugee German scientists decreased, but from 1933 to 1948 (the year Polanyi accepted the chair of Social Studies at Manchester), his contacts with British scientists increased, and eventually included William H. Bragg and his son William L. Bragg, Arthur Allmand, Patrick

Blackett, Christopher Ingold, Cyril Hinshelwood, and Eric Rideal. There are a number of exchanges from this period with Max Born and Erwin Schrödinger, but perhaps his most important associate during this period was Japanese chemist Juro Horiuchi.

During these first years in England, Polanyi turned his interest to the philosophical attack presented free societies by the totalitarian governments of Germany and Russia. In 1935, he published his first non-scientific work, "U.S.S.R. Economics—Fundamental Data System and Spirit." This was accompanied by a film which criticized the system of Soviet economics as an attack on liberty. While devoting most of his time to scientific pursuits, Polanyi spent part of the next five years in work on *The Contempt of Freedom* (1940), his large-scale critique of totalitarian government. In the early 1930s, Polanyi had visited the Soviet Union and had become friends with two Soviet chemists, Alexander Frumkin and Nicolai Semenov. Both were to write him asking that he stop his attacks on Soviet economic policies.

A devoted Keynesian, Polanyi's writings on economic subjects are divided between attacks on the Soviet system and lucid commentaries on the work of Lord Keynes. Between 1935 and c1950, Polanyi corresponded with a number of important economists including Friedrich A. Hayek, David Caradog Jones, Wolfe Mays, and John Maynard Keynes. His position as a scientist and a social thinker led him to become involved with a group of intellectuals in England concerned with social problems. This group, the Moot, was convened by Joseph H. Oldham, editor of the *Christian Newsletter*.

The war was passed in divided intellectual pursuits. Polanyi continued his scientific studies and tried to obtain military projects through Sir William Lawrence Bragg. At the same time he wrote on economic subjects. It was during these years that he helped to found, with John R. Baker, the Society for Freedom in Science which he used as a forum for developing his ideas on scientific liberty.

The philosophic ideas of Michael Polanyi first took characteristic shape during the war years. His opposition of planning in science led to an epistemology of science grounded in a belief in an individual nature of discovery, unhindered by official or dogmatic interference. In 1945, Polanyi published *Science, Faith and Society*, his first large-scale philosophic work and the foundation for his theory of knowledge. The evolution of Polanyi's thought is traceable in the Papers through a number of manuscripts, beginning with his 1936 *On Truth, On Reason and Science and Liberty* and continuing with his studies of scientific planning throughout the late 1930s and early 1940s. By 1950, the date of the first of his University of Chicago lecture series, *The Logic of Liberty*, his interest in philosophy dominated all other intellectual concerns.

In 1951, Polanyi was offered a position at the University of Chicago on the Committee on Social Thought and was awarded a large grant by the Rockefeller Foundation. The State Department, however, held up his immigrant visa under the McCarran Act until Polanyi

withdrew it, consequently remaining in Manchester. He was suspected of past involvement in a subversive organization, the Galilei Circle of his Hungarian youth. Ironically, he was involved with the most significant intellectual anti-Communist force in post-war Europe, the Congress for Cultural Freedom. When Princeton University made Polanyi an honorary Doctor of Science during its 1949 bicentennial celebration, he was cited as "a veteran campaigner against those who would take from science the freedom she requires for the pursuit of truth." His book, *The Logic of Liberty*, 1950, would continue his attack on Soviet infringement of personal liberty begun nearly twenty years before.

Following this debacle, Polanyi became a regular visitor to the United States and the University of Chicago. Two of his lecture series here were ultimately published as *The Logic of Liberty* (1950) and *Meaning* (1936). Between 1951 and 1958, when he retired from Manchester to accept a position of senior research fellow at Merton College, Oxford, Polanyi wrote his central philosophical work, *Personal Knowledge*. *Personal Knowledge* grew out of Polanyi's 1951 Gifford lectures.

Another aspect of Michael Polanyi's life, political involvement, can be traced throughout the collection. Prominence as a scientist and anti-Communist social thinker led Polanyi to recognition as an important commentator on current affairs. Throughout World War II, his letters, articles, and reviews appeared in various British journals, particularly the *Manchester Guardian*.

Polanyi was a major figure in the debate over intellectual liberty and most particularly the issue of planning in science. He was co-founder with John R. Baker of the Society for Freedom in Science in 1941. In the post-war period, Polanyi was an active participant in the organization of the Congress for Cultural Freedom and its English affiliate, the Committee on Science and Freedom. His close involvement with these organizations is best illustrated in the correspondence through exchanges with such figures as Raymond Aron, Konstantin A. Jelenski, Shepard Stone, and Michael Josselson.

By 1972, age and infirmity had slowed Professor Polanyi's work. His final years were spent at home in Oxford and in a Northampton nursing home. During this period, Polanyi's wife of fifty-six years, Magda Kemeney Polanyi, managed his affairs. She supervised the translation of *Personal Knowledge* into German and was responsible for decisions concerning the disposition of Professor Polanyi's papers and library. Michael Polanyi died in the hospital at Northampton on February 22, 1976. He was eighty-four.

Scope Note

The papers of Michael Polanyi are a continuing testament to the richness of the philosopher's life. In order to facilitate an understanding of the evolving nature of Michael Polanyi's career, the papers have been divided into four basic series and organized in a largely chronological

framework: Correspondence (Boxes 1-20); Notes (Boxes 21-25, folder 7); Manuscripts (25:8-44:11); and Offprints and Memorabilia (45-60).

When received, correspondence, manuscripts, notes, and memorabilia had already been sorted by Professor Polanyi's secretary. The correspondence had been arranged alphabetically in yearly files from 1950 to 1975. Earlier correspondence had been grouped together in no particular order. Professor Polanyi's manuscripts were likewise ordered chronologically and labeled by the title given a particular document at the time of its composition and not necessarily by its final title at the time of publication or delivery as a lecture. The notes were segregated into files arranged alphabetically by author and there were several folders of notes labeled "miscellaneous." Memorabilia was scattered throughout the collection in folders of clippings, photographs, and unorganized announcements, invitations and the like. In addition to these relatively clear groupings, a good deal of overlap occurred with notes and letters scattered among the manuscripts. Letters and clippings from Polanyi's mother Cecile had been separately filed. These items (Boxes 18-20) have been separated but not further organized.

The original organization has been largely retained. Correspondence is interfiled chronologically with separate categories for certain specific people and organizations. The letters and manuscripts relating to Polanyi's involvement with John R. Baker and the Society for Freedom in Science and Joseph H. Oldham and the Moot are separate as are letters to and from his close friends and colleagues Marjorie Grene and Harry Prosch. Most of the family correspondence has been interfiled, but there is a box of letters from his brother Karl Polanyi and Karl's wife Ilona which covers over fifty years of family history. All the sections of correspondence are filed chronologically with undated and fragmentary letters arranged alphabetically at the end of the series. The correspondence contains letters to Polanyi as well as copies of letters he sent out. An index of selected names has been prepared which lists his correspondence with significant figures in twentieth-century history and scholarship.

During the course of World War II, Polanyi lost contact with many friends and family on the continent. Correspondence during the early war years, 1939 and 1940, is filled with pleas for assistance from loved ones trapped in occupied lands (3:14-4:5). Polanyi was instrumental in bringing his brothers Karl and Adolf and his sisters Laura and Irene to England (17:9).

Correspondence with Dr. Oldham and papers presented at meetings of the Moot have been grouped together in this collection (15:3-10). Polanyi corresponded independently with two significant members of the Moot, T. S. Eliot and Karl Mannheim. Their letters will be found in the correspondence.

One of the most significant influences on the development of Polanyi's thought was the correspondence he shared with his friend and colleague, philosopher Marjorie Grene. This

material has been grouped together (19:1-9), but it contains only two letters which predate Personal Knowledge.

Manuscripts in the collection are also arranged chronologically by date of composition. Their order has been determined by the dates ascribed to them by Polanyi when they were originally filed. Thus, a revised version of a paper will generally fall under the year of its revision and not the year of its composition. Exceptions to this ordering occur with manuscripts composed at an earlier period and drawn together for a lecture series. Such manuscripts have been filed by the dates of their lectures. Titles and descriptions of manuscripts are taken from the text and have not been matched with any bibliography of Polanyi's published writings. It is hoped that this approach, respecting the integrity of Polanyi's original organization and titles, will help to illuminate the evolving nature of his thought.

The manuscripts series jumps from a solid collection of pre-1952 manuscripts to an equally large group of post-1960 manuscripts. This leaves the researcher with sources for the foundation and later developments of Polanyi's thought, but without sources for the work which culminates in Personal Knowledge.

In spite of this lack of early material relating to Polanyi's philosophical thought, later correspondence with Marjorie Grene and others is abundant. Polanyi's thought ranged over a multitude of ideas and disciplines. His views on the mind led to correspondence with Carl Rogers, Abraham Maslow and Erik Erikson; his views on language, with Noam Chomsky and Yehoshua Bar-Hillel; on visual perception, with Maurice Pirenne. Perhaps the most consistently stimulating exchanges in the collection occur with old friends like Grene, Arthur Koestler, and Eugene Wigner.

The range of Polanyi's thought in his later years was enormous. The *Logic of Personal Knowledge*, a festschrift presented to Polanyi on his seventieth birthday in 1961, contains essays by such prominent thinkers and friends as Arthur Koestler, Raymond Aron, Bertrand de Jouvenel, and C. V. Wedgwood. After 1960, there are a large number of manuscripts in the collection which help to demonstrate the growth of Polanyi's thought. Of particular interest are the sets of lectures delivered between 1960 and 1971. Included in this group are the 1960 Gunning Lectures, *Perceptions of Personal Knowledge* (34:1-6); the 1962 Terry Lectures (35:6-12); *Man in Thought*, a 1964 Duke University lecture series (36:4-37:3); Wesleyan lectures of 1965, *Man's Place in the Universe* (37:15-38:5); and *Meaning*, lectures and seminars at the University of Chicago in 1969 (39:6-40:1). The majority of philosophical manuscripts are corrected typescripts of lectures and papers delivered between 1960 and 1972. There are no galley proofs in the collection for any of Polanyi's publications.

Research notes have been divided into two groups: subject and author. The subject notes are drawn together from inter-related material in the folders originally marked "miscellaneous."

"Author notes" are an alphabetical arrangement of Polanyi's files of quotations by and comments on a variety of scientific, political, philosophical, and literary figures. The memorabilia in the collection has been separated into the following categories: photographs and postcards; general memorabilia including announcements, addresses, and receipts; clippings, dissertations, and interviews with Polanyi; and offprints and other published materials.

Nearly all of the series of research notes are devoted to philosophy. When received, the notes had been divided between "author notes" and "miscellaneous." The miscellaneous notes have been sorted by subject and inventoried. The author notes have been arranged alphabetically by last name of author. Most of this material contains summaries, commentaries, and quotations relating to the work of a specific author. Together these sets of notes formed a reference file which Polanyi could turn to in writing.

INDEX OF SELECTED CORRESPONDENTS

This index highlights Polanyi's correspondence with a wide range of prominent individuals between 1913 and 1975. The correspondence is arranged chronologically, with undated letters arranged alphabetically at the end of the series. Indexed names are followed by the dates of their correspondence or, if there are undated letters, by the number of pieces followed by n.d. Correspondence of John R. Baker, Joseph H. Oldham, Marjorie Grene, Julius and Elsa Hollo, Harry Prosch, Karl and Ilona Polanyi, and Cecile Polanyi follows the undated group.

INVENTORY

Series I: Correspondence

This series includes all letters in the collection written to and by Michael Polanyi, Magda Polanyi, and Cecile Polanyi. The correspondence is arranged chronologically with undated letters organized alphabetically by correspondent at the end of the series. There are two folders of unidentified, undated correspondence and fragments following the identified undated correspondence (14:13-14). Letters from John R. Baker, Marjorie Grene, Joseph H. Oldham, Julius and Elsa Hollo, Harry Prosch, Karl and Ilona Polanyi, and Cecile Polanyi have been separately arranged (Boxes 14-20).

The correspondence in the Polanyi Papers amply documents the development of his scientific researches. His early scientific studies of adsorption and reaction kinetics are mentioned in several letters from the 1917-1919 period (1:5). In the autumn of 1920, he joined the Kaiser Wilhelm Institute; until 1933, when Polanyi left Berlin, he corresponded regularly with many of the leading scientists of Germany (1:6-2:15) and the larger European community (including James Franck, Otto Hahn, Werner Heisenberg, Wilfred Heller, and Leo Szilard.)

Series II: Notes

The Notes are divided into subject and author sections. The subject notes have been drawn together from materials originally labeled "miscellaneous" by Professor Polanyi's secretary. They have been organized topically and placed in alphabetical order. The author notes are compilations of quotes by and commentaries on authors whose work interested Polanyi. All of the author notes are grouped together and are arranged alphabetically by last name.

Subseries 1: Subject

Series III: Manuscripts

Series III, Manuscripts contains drafts and final copies of lectures and publications, German scientific manuscripts, speeches of introduction and thanks, patents, records of laboratory financial expenditures, poetry, notebooks, and bibliographic citations.

The drafts and final copies of lectures and publications (25:8-43:2) have been arranged chronologically by order of composition, with undated manuscripts listed alphabetically at the end of the section. Within yearly groups, the manuscripts are arranged alphabetically by the titles given them at the time of composition. All titles are in italics except for chapter headings and untitled manuscripts, identified by first line of text, which are placed in quotation marks. Brief manuscripts of less than five pages are ordered in folders labeled "miscellaneous short manuscripts." The manuscripts have not been matched with any bibliography of Polanyi's published or unpublished writings except as an aid in determining the date of composition. Revised versions of manuscripts are placed under the date of revision and not under the date of original composition. An exception to this rule occurs when a group of manuscripts have been brought together for a specific lecture, such as occurs in 33:1-4. In such an instance, the manuscripts are organized under the date of the lecture with the date of original composition listed parenthetically.

The remaining manuscripts (44:3-44:11) follow the drafts and final copies of lectures and publications. The German scientific manuscripts (43:3-4) are fragmentary and contain little substantive information on the scientific work of Professor Polanyi. The speeches of introduction and thanks (43:5) consist of brief remarks made by Polanyi at banquets and conferences. The patents and records of laboratory expenditures (43:6-7) contain fragmentary evidence for Polanyi's work at the Kaiser Wilhelm Institute between 1923 and 1933. The small section of poetry (43:8) holds verses by Michael Polanyi as well as poems written for him on special occasions. The nine notebooks in the collection are difficult to categorize because of diverse contents. There are four short and jumbled diaries covering the period 1926-1947 (44:1-4). In addition there are four undated notebooks (44:5) which contain brief thoughts and comments on miscellaneous authors, the English countryside, the weather, and other equally diverse subject matter. The final notebook (44:6) is an obsolete index to Professor Polanyi's correspondence files. The manuscripts series concludes with five folders of bibliographic citations.

The earliest dated manuscripts are from 1936 and deal exclusively with economics and philosophy. There is one small group of scientific manuscripts (43:3-4,7) but they are fragmentary and indicate little about Polanyi's scientific work. The sections on science in the research notes (22:7-12) are philosophical in nature. Manuscripts such as the 1935 lectures on economics (25:9), the 1943 essays on economic planning (28:1-3), and the 1944 Principles of Economic Expansion (29:11-12) are interesting interpretations of Keynesian thought. Other manuscripts from this period like the 1938 Reflections on Marxism (25:16), the 1940 Collectivist Planning (26:3), and the 1947 Soviets and Capitalism (31:4) are criticisms of Soviet

economics. By contrast, the notes contain little of relevance to Polanyi's economic thought. There are a few general notes on economic subjects (21:6) as well as material on individual economists like Keynes and von Hayek, but the majority of economic material is found in the correspondence and manuscripts.

Series IV: Offprints and Memorabilia

Memorabilia in the Polanyi Papers falls into five groups: photographs and postcards; personal materials (addresses, announcements, Christmas cards, invitations, obituaries, programs, receipts, reports, etc.); miscellaneous clippings and multi-media; offprints by Michael Polanyi; and offprints by other authors and other secondary published works, including photocopied records of Polanyi's collection of books.

The photographs are of Michael Polanyi, his family and friends. If known, the name of the subject is indicated on the back of the print. The clippings include letters and articles by Michael Polanyi, as well as reviews of Polanyi's work, dissertations which address Polanyi's thought, and articles by Polanyi's mother Cecile (mostly copies of her fashion column in a Budapest newspaper). Other items include a small group of clippings and other printed materials from the German National Socialist period, as well as taped and filmed interviews with Polanyi. This collection also holds offprints and some privately distributed lecture material by Michael Polanyi. Offprints by other authors which remain in this collection have been annotated by Polanyi, or bear holograph inscriptions by their original authors. Finally, this collection holds six volumes of bound photocopies of the title pages of the books in Polanyi's collection, which were dispersed in 1994.
