Appendix

The following appendix is designed to provide interested persons with the inventory of numeral classifiers isolated in Tenejapa Tzeltal to this point. It is highly important to point out that the glosses employed do not, except in the grossest sense, approach the semantic ranges of each classifier, or of the root forms from which they are derived. As Metzger has recently noted,

...translation parallels have serious limitations as a device for understanding the description.... Thus, Frake (1961) in his discussion of Subanun medical beliefs, speaks of English "glosses" for the Subanun structure of things—the glosses being understood to proximate devices to give the reader a sense of the familiar.... The translation parallels are descriptive crutches designed to help the reader who will not subsequently attempt to reformulate the description or test its adequacy to "understand" the approximate content. (1963:15-16)

Not until an adequate analysis can be made, utilizing the technique of photography, both still shots and cinema film, and perhaps recording tapes (for forms with auditory components of relevance) and including the responses of numerous informants, can one presume to offer glosses that even begin to approach relevant distinctions made by Tenejapa Tzeltal speakers.

The inventory is presented in terms of the position and articulation of the phonemes of Tenejapa Tzeltal (excluding those phonemes, /b, d, g/, which are limited to occurrence in lexemes of known Spanish origin). I.e.,

p, p', t, t', ʃ, ʃ', č, č', k, k', ?, b', ʁ, ɾ, h, m, n, l, w, y
Vowels: i, e, a, o, u

The phoneme /r/ does not occur initially in any numeral classifier in our data.
Each classifier entry will be followed by the root from which it is derived. If the classifier is derived from a positional verb root, the gloss for that root will be given as it is derived as a transitive verb base (by the stem formative -an). Where possible, the entry will include those classifiers judged by informants to participate in the same semantic domain(s). Where glosses alone are obviously not appropriate, line drawings will be attempted.

Only in those instances where we have determined with some certainty the general range of the classifier have we included the nouns for the objects or actions enumerated. For example, there are numerous classifiers utilized in the enumeration of highly specific and complex actions of 'hitting' or 'striking.' The classifier is selected, among other things, in terms of the type of actions and the object on which the action is directed. The glosses given, however, will most generally indicate only enumeration of 'blows' or the like. An inventory of each classifier with a listing of the nouns occurring commonly with it is in preparation.

The following abbreviations will be used: tv - transitive verb; pos. v. - positional verb; n - noun; iv - intransitive verb; p - particle; ? - indicates unknown or uncertain derivation.
